## Miami's Expanding Horizons

BY WILLIAM H. NICHOLAS

**I**N WEATHERED slacks and sneakers the professor knelt on the deck of the cabin cruiser, working intently over a small object. He looked up, then extended a penknife in my direction. On the open blade rested a small quantity of a yellowish substance.

"Have some sea urchin caviar," he invited. With some misgivings I tasted the offering. It was rich and fatty. He was slightly disappointed at my lack of enthusiasm.

"Too bad it comes in such small amounts," he said. "It's delicious. But one sea urchin yields only about half a teaspoonful. Maybe you would find raw conch more to your taste."

He handed over a slice. To me it had the consistency of a piece of inner tube, with about the same degree of succulence.

"It's better," he said, "in a salad, with vinegar."

### New Food Sources in the Sea

The professor, Dr. F. G. Walton Smith, Director of the Marine Laboratory of the University of Miami, turned to eight bronzed young men and a girl who surrounded us.

"There are lots of things in the sea, like urchin roe and conch, which are edible and nourishing," he told his small audience. "Most people simply don't know about them."

Many Floridians are acquainted with the edible qualities of conch, or "conk," serving it in salads, or marinated, or with steaks.

Each of the earnest youngsters carefully examined his own queer loot, retrieved a few moments before from the floor of Biscayne Bay. They scribbled hurriedly in their notebooks. The group was a marine biology class at the University of Miami, aboard the *Megalopa*, one of the Marine Laboratory boats, anchored off Ragged Key some 10 miles southeast of Miami (page 575).

Thousands of northern visitors were splashing in the surf or lolling on the sands of Miami Beach. Crowds thronged Lincoln Road, its fashionable shopping thoroughfare.

Barkers for sight-seeing and deep-sea fishing boats extolled the merits of their craft to crowds on Miami's Bayfront Park docks. Winter guests clad in flaming sports attire strolled up and down Flagler Street.

Sailboats darted in and out from private docks of Coconut Grove homes fringing the bay. Automobiles bearing license plates from half the States in the Union parked along Coral Gables' "Miracle Mile." Racing enthusiasts converged on Hialeah Park and its flamingo-dotted oval.\* The Greater Miami area was living up to its reputation as a vast all-year playground.†

But the little marine biology class, poring over sea urchins, filefish, sponges, coral, and shamed-faced crabs (so-called because they insist on hiding their faces with their claws), represented a different, and highly audible, note in the Miami symphony.

### University Sparks Cultural Life

With half a million permanent residents, and more constantly coming, the Miami area is weaving an unmistakable culture pattern. Sparking this pronounced trend is the astonishing University of Miami.

I drove out toward the University from Coral Gables, passing through its tree-lined streets, and then by broad highways into open countryside. Suddenly I saw before me a streamlined mass of steel, concrete, glass, and

\* See "Flame-Feathered Flamings of Florida," by W. A. Watts, NATIONAL GEOGRAPHIC MAGAZINE, January, 1941.

† See "Florida—The Fountain of Youth," by John Oliver La Gorce, NATIONAL GEOGRAPHIC MAGAZINE, January, 1950.

fieldstone—a group of spectacular and distinctly modern-type buildings rising in open pineland and rubbing shoulders with several low wooden structures resembling army barracks.

I did not have to look at the sign to identify the scene as the new main campus of the University of Miami (page 581).

Born in the midst of the fabulous Florida land boom of the 20's, and almost wrecked in the collapse and general depression that followed, the University survived hurricanes, both physical and financial, to become one of the Southland's outstanding educational institutions.

The University was chartered in 1925 and opened its doors the next year. The skeleton of a huge building was erected on a 160-acre campus one mile south of Coral Gables' business center, and 966 citizens pledged nearly \$9,000,000 to the fledgling seat of learning.

Then, on September 18, 1926, Miami's worst hurricane struck with devastating fury.\*

The land boom collapsed. Nearly all of the pledges went unredreemed. Title to all but 40 acres of the campus melted away.

How the University survived these blows, and the general depression which followed, is a story of a struggle won chiefly through the indomitable courage of its president, then and now Dr. Bowman Foster Ashe (page 570).

As recently as 1942 the University was conducting its courses in one three-story building, once a hotel in Coral Gables, and housing its students in an adjoining structure.

#### Enrollment Today Exceeds 11,000

Today, eight years later, it has an enrollment of some 11,000 students and operates on three campuses.

The heart and glory of the University of Miami is its main campus of 260 acres, built around the 40 acres left over from the depression, along with its "skeleton" of steel and concrete.

When World War II ended, the main campus was a wild stretch of palmettos and Caribbean pines, transected by an unused tidal canal. To this unprepossessing location wartime barracks from Florida military camps were hauled, other temporary buildings were erected, and classrooms and administrative offices were installed. Then it was that new building began.

Planners of the University have developed the campus in the spirit of Caribbean Florida's new architecture. All buildings have natural cross circulation of air. Sheltered galleries, walkways, and breezeways flank the outer walls. And they are built to withstand

hurricanes. The architecture is startling to an observer accustomed to cloistered halls and ivy-covered walls on a university campus.

The new "dormitories" are not really dormitories at all, but modern apartment houses containing 533 apartments which accommodate from three to seven students each, and smaller units for the married GI student and his family (page 588). The project covers 60 acres of campus fronting on Dixie Highway.

"How much use do the boys make of their electric stoves and refrigerators?" I asked one of the University's administrative officers as we inspected several of these well-furnished apartments.

"We wondered about that ourselves at first," he answered. "But, surprisingly enough, the kitchen equipment of nearly every one is put to use. Of course the girls do their own cooking, and so do the boys. New boys usually stock up first with things they shouldn't, things their mothers never provided at home. But they soon discover that after all Mother knew something about preparing meals. They find their innovations either cost too much, thus wrecking their budget, or that their meals are not very well balanced. Then they settle down and get along nicely on about \$5 to \$7 a week apiece.

"When half a dozen new boys take an apartment, they require several weeks to iron out their housekeeping routine. Somebody *must* take out the garbage; beds *must* be made every day. But they soon learn to apportion the work."

The first new educational structure to be erected was the Memorial Classroom Building (page 574). Year-round temperature in its airy lecture rooms averages 75.2°. Then came the Student Club, bordering and partly overhanging an irregular lake made by widening a portion of the old canal (page 569).

This striking and popular meeting place includes the University cafeteria, a soda bar, lounging and reading rooms, and dancing terraces—a complete community recreation area. With a well-stocked tray from the cafeteria, I made my way to one of the pavilions stretching out over the water and ate a substantial meal there to the accompaniment of music drifting out from the soda bar's juke box.

All the time this new building was going on, the 23-year-old "skeleton" still rose stark and gaunt. Last autumn the architects turned their attention to it and, with a few adaptations, they used the original concrete and steel framework to erect the most imposing

### Marine Biologists Chart a Voyage to Study Mysterious Pastures of the Sea

The National Geographic Society and the University of Miami have jointly launched a long-range research program to study plankton, the drifting meadows of microscopic fodder on which most sea life depends for existence. Field of operations will be the Atlantic between southern Florida and the Bahamas. Dr. F. G. Walton Smith (left), head of the Marine Laboratory at University of Miami, directs the study. His associate is Dr. Hilary B. Moore, another top-ranking oceanographer on the Laboratory's staff (page 568).

structure on the campus, the Merrick Building (pages 581 and 585).

Ground soon will be broken for the new Law School building. Much of the money for this project is being raised by the law students and faculty members themselves.

A dozen more buildings must rise before the University plant reaches the minimum expectations of its loyal supporters. Meanwhile, the cultural impact of this lusty infant on Miami and, in the field of research, over a much wider area, daily becomes more pronounced.

#### German Dramatist's Play Presented

Miami, for example, has no legitimate theater. The University supplies that need. The Drama Department last season staged three major productions in its conventional Box Theater and four in its Ring Theater,

with minimum runs of 12 performances each. More than 40,000 persons attend in a single season.

In the Box Theater I saw a presentation of *The Ascension of Hannke*, one of the plays of Gerhart Hauptmann, German dramatist who received the Nobel Prize for Literature in 1912. More or less rugged fare for the average American theatergoer, the production represented a highly successful effort to bring before a Miami audience a work by a playwright highly considered on the German-speaking stage but not too well known in the United States.

Later, in the Ring Theater, I saw the opening of Edmond Rostand's *Cyrano de Bergerac*, with a long-nosed Cyrano worthy of Broadway (page 587). John Behney, a University-law student, gave a sterling interpretation of Cyrano before a sparkling first-night audience.

Goggin

### "Don't Fear This Harmless Florida King Snake"

Mrs. John Goggin, Jr., of the Miami Junior Museum, holds the reptile to demonstrate that it is nothing to be afraid of. The Miami Junior League opened the Museum in January, 1950, to acquaint youngsters, particularly newcomers from the North, with subtropical flora and fauna. Soon 3,000 school children a month were pouring through its doors (page 578).

The Ring, as its name implies, is a circular theater, with a small stage in the center, no scenery, and a minimum of furniture, props, and lighting. So intimate is the effect of this staging, with the players almost in the laps of the audience, that the onlookers seem to participate in the action.

Fred Koch, Jr., head of the Drama Department, told me of an incident which occurred during one Ring play. At a certain juncture a character lighted a cigarette. One night his lighter failed to work after repeated attempts. Casually, a spectator in the first row held out his own lighter, the actor took a puff, and the play went on. This all seemed such a natural thing to do that no one considered it an interruption.

The idea of the modern arena theater was developed by Glenn Hughes at the University of Washington, Seattle, in 1932. Now New York, Miami Beach, Atlanta, Dallas, and an

increasing number of smaller towns have them.

Growing pains account for the fact that University of Miami's Ring is housed in a tent. The original quarters were entirely too small. Soon a new theater building will arise.

### Symphony Presents Eminent Artists

The School of Music plays a leading role in the cultural life of Greater Miami. Of the 90 members of the University of Miami Symphony Orchestra, two-thirds are students and the remainder professional musicians. Last season large audiences heard its nine pairs of concerts, starring as soloists such distinguished artists as Helen Traubel, soprano; Lauritz Melchior, tenor; Jesus Maria Sautoma, pianist; Jean Bedetti, cellist; and Frank Edwin, basso. The University also presented the Budapest String Quartet in recital.

The University Band (page 576) and the Chorale add to the community's musical fare.

Miami News Journal

### Bayfront Park's New \$80,000 Band Shell Creates the Illusion of a Giant Sea Shell

The stage accommodates 250 performers; the orchestra pit, 150 musicians; outdoor seats hold 10,000 persons. Gunitite, a cement and sand mixture, covers the steel frame with a smooth, white finish (page 183).

One wing of the new Merrick Building houses the art galleries, where the Art Department presents frequent showings of loan collections (page 570). I saw a representative group of contemporary American paintings lent by the Whitney Museum of American Art, the Museum of Modern Art, and other well-known galleries.

The University is keenly aware of its proximity to Latin America. Its closest big college and friendly neighbor, even closer than the University of Florida at Gainesville, is Cuba's venerable University of Havana.

More than 140 students from Latin America and two score from Puerto Rico are enrolled at Miami. Intellectually and socially, these boys and girls fit well into the student body from the time of their arrival. At first they naturally tend to clique in a language group, but as they learn to speak English they engage in their share of campus activities.

The University's Hispanic-American Institute is well known for its published Hispanic-American Studies. Inquiries from other universities are numerous and include two received on the same day from such distant points as Wellington, New Zealand, and Tomsk, Siberia. Institute lecturers include prominent South American educators.

The University of Miami boasts the first endowed chair of Human Relations in the country, and it also was the first school to offer a course in Human Relations as an undergraduate major. The chair was established by Mr. and Mrs. Benjamin E. Bronston, of Miami Beach.

The students plunge into discussions of dynamite-laden situations and let off steam by engaging in practical ventures, such as raising eight tons of food and clothing as Christmas gifts last year for two-thirds of Florida's Seminole Indians. Their approach to social problems, however, is that of students and learners, not reformers.

### Books by the Truckload

Nothing better illustrates the rapid growth of the University of Miami than the upbuilding of its library. In 1940 volumes numbered 53,861. Five years later the figure had grown to 85,545. Today books total a quarter of a million on a wide variety of subjects.

While I was making this survey, the librarians were awaiting a shipment of 33,000 volumes purchased from a Boston bookstore. This will be the last general consignment bought, since any more large orders doubtless would contain too many duplicates.

The University has contracted to purchase the large collection of Floridiana acquired by Dr. Mark F. Boyd of Tallahassee over a long period of years. Books in this assortment are available now to students upon request. It rivals in importance the Floridiana collections owned by the State Library and the University of Florida.

The University also has a collection of 800 rare Spanish volumes, obtained from a California estate.

#### Developing an Improved Battery

In the general field of research the University makes important contributions. The Electronics Research Laboratory, for example, is perfecting a battery to which water need never be added. Copper plates have been substituted for lead. When completed, the battery is permanently sealed, so that it never gives off any noxious gases. Those generated are recombined into water. Value of such a battery for either airplanes or submarines is obvious.

I was shown also a small hearing-aid battery designed on the same principle. As in the larger batteries, use of copper plates means reduction in weight to half that of a standard battery. More important, it can be recharged at inconsequential cost.

The Electronics Research Laboratory is testing an ozone treatment to preserve bananas, citrus fruits, potatoes, and other produce during shipment. Surprisingly successful results have been obtained by introducing ozone into refrigerator cars just after they have been loaded with perishables.

Different but also significant approaches are under way on the south campus—an extensive research program in tropical foods.

Mango, guava, Barbados cherry, carissa, and soursop have been made into purees and used to flavor ice cream. The research men themselves constitute a taste panel and sample the new food products to determine whether they like them and whether they serve best as "topplings" or as component parts of ice cream.

Two years ago the Food Research Laboratory worked out a process for making frozen banana puree. This was not easy, for previous processes darkened the bananas and detracted from their salability. A manufacturer of baby foods is successfully using the new method.

Dr. Arthur L. Stahl, Director of the Laboratory, did important work in frozen orange juice concentrates, now so popular all over the country. Today he is testing other juices in the laboratory's miniature plant model of a

juice concentrator. I stood by as he went to work on a gallon of pineapple juice, reducing it to a concentrate by evaporation. Then I tasted it after water had been added. It suited me.

#### Bean Cooking Made Easy

In another building I saw full-sized factory equipment employed in packaging fresh-frozen stringless beans. One innovation is a nipping machine which not only takes off the ends but cuts the beans up into small lengths, so all that remains for the housewife to do is to transfer them from package to cooking utensil.

Only a few of the wartime buildings on the south campus are in use, but the 2,048 acres, under lease from the U. S. Navy, are being utilized as a nucleus for a future School of Tropical Agriculture. Some 5,000 young trees have been set out—avocados, guavas, white and yellow sapotes, lichees, limes and other citrus fruits, mangoes, and sapodillas. For ease in recording data they are planted in exact geometrical patterns, with a block of 10 acres allotted to each species.

Fruit from the trees eventually will afford an ample supply to the Food Technology Department's processing and packaging units.

Studies of a new pest, a voracious beetle named "hellipus," whose larva gorges itself under the bark of avocado trees with devastating effect, are expected to lead to the saving of many groves in south Florida and elsewhere.

#### Identifying the Red Tide

Researches of the Marine Biology Department have gained wide acclaim. For example:

In November, 1946, a so-called "red tide" appeared on the west, or Gulf, coast of southern Florida near Naples. Fishermen reported countless dead and dying fish floating in the vicinity and about 10 miles offshore. The sea water was strangely discolored.

By the end of January, 1947, the red tide had moved as far north as the bays and beaches of Fort Myers, Sanibel Island, and near-by areas. During the summer of 1947 the mysterious scourge broke out again, causing even greater losses of fish and reaching north almost to Tarpon Springs. By the end of August it had disappeared and has not returned to date.

Many conflicting theories as to the nature of the red tide were advanced. But the University's Marine Laboratory definitely established the immediate cause. The reddish color and the slimy consistency of the water occurred from the presence of a

previously undescribed microscopic form of life, now known as *Gymnodinium brevis*. It is little more than one thousandth of an inch across. With the aid of two whiplike threads attached to its tiny body, it moves jerkily through the water. Normally it is present in sea water in harmless quantities of less than 1,000 to the quart.

But during the red tide more than 60 million of the little pests were concentrated in a single quart of sea water, and in such density became violently poisonous to fish.

How or why the abnormal concentration occurs at irregular intervals is still the subject of searching scientific inquiry.

The Marine Laboratory was established in 1927 as a tropical marine station readily accessible to the educational and scientific centers of the United States. South Florida climate permits study of marine biology under favorable year-round conditions. Terrific competition for food and space on the coral reefs and the enormous variety of marine species engaged in this struggle provide a living classroom and workshop. Along Miami Beach and the Florida Keys the Gulf Stream is but four miles offshore.\*

I made several trips to the reefs on Marine Biology boats. On one occasion members of a class took turns descending to the floor of Biscayne Bay in a diving helmet (page 575). On the bottom they picked up coral and numerous other types of marine life.

My activities were confined to helping man the air pump and inspecting the specimens retrieved from the bottom. But photographer Justin Locke, more adventurous, donned the helmet himself and enjoyed his brief underwater experience.

The inoffensive marine life thus disturbed by the youthful researchers usually takes its uprooting calmly and makes no fuss when it is hauled aboard. But there are exceptions.

Locke was anxious to make a close-up of a few specimens held in the palm of Dr. Charles E. Lane's right hand. The doctor obligingly complied with the request and artistically arranged a sea urchin, some coral, bits of sponge, a small conch, and a shamed-faced crab in his hand, which he held out over the gunwale. Locke was about to release the shutter of his camera when the crab so far forgot its embarrassment as to give Dr. Lane a mighty nip in his thumb.

More quickly than the speed camera could record it, Dr. Lane jumped backward, lustily crying "Ouch!" at the same time. Presto! All the specimens, including the crab, were en route to the bottom of the sea once more.

The researches of the Marine Biology Department are interesting and varied, as a partial list of its publications shows: *Hints on Smoking Fish and Other Seafood*, *Florida Crawfish Research*, *Biological Aspects of a Potential Sardine Industry in the Caribbean Area*, *Survey of the Sponge Grounds North of Anclote Light*, *A Fisheries Program for Florida*, *Atlantic Reef Corals*, *Sea Turtles and the Turtle Industry*, *The Spiny Lobster Industry of the Caribbean and Florida*, *The Commercial Shrimp Industry of Florida*, *Check List of the Florida Game and Commercial Fishes*.

#### Long-range Study of Plankton

Latest scientific investigation of the Marine Biology Department is a joint study with the National Geographic Society of oceanic plankton, the drifting "meadows" of microscopic plant and animal life which sustain most of the fish population of the world (page 564). Work will be conducted on a year-round basis in the Atlantic between southern Florida and the Bahamas.

Under a high-powered microscope the sea creatures to be studied present a weird assortment of odd shapes and often delicately beautiful coloring—a surrealist menagerie of infinite variety. The name "plankton" is derived from the Greek word for "wandering," which describes the drifting life of these minute organisms.

To the fishes of the sea, large or small, plankton is as indispensable to survival as the grasses are to the animals which range the land. When plankton pastures dwindle, the fish are fewer. When they are lush, the fish teem.

How do these plankton meadows materialize? Why do they migrate from time to time? These are two of the many questions to which answers will be sought.

The University's research boat *Megalopa* (page 575) will periodically spend 24 hours on station to give a round-the-clock check on the way the plankton pastures move up toward the surface with clocklike regularity at nightfall and descend again to lower depths with the coming of day. What causes this mysterious movement? †

False echoes caused by this shift of infinitesimal creatures gave trouble to the Navy's

#### • University of Miami's President Preview a New Painting for the Art Gallery

To President J. Allen Ivey, the University of Miami's Art Gallery is a place where the past meets the future. Ivey, who is also the University's 10th president, is looking at a new painting by a local artist, which he says is a "beautiful example of the University's commitment to the arts and to the community."

#### • How Wave Are a Cow's Brain Waves? This Electric Gadget Finds Out

The animal kingdom is full of creatures that can communicate with each other. But how do they do it? A new study from the University of Miami shows that cows can communicate with each other using a special kind of brain wave. The study, which was published in the journal *Science*, found that cows have a special kind of brain wave that is called "delta waves." These waves are thought to be a sign of deep sleep, but the study found that they can also be a sign of communication between cows.

[illegible]

Dr. David Evans and Dr. William J. Evans, Jr. are the authors of the book, "The Evans Family: A History of the Evans Family in America, 1600-1900." The book is a comprehensive history of the Evans family, tracing its roots from the early 17th century to the present. It covers the family's migration from England to America, its growth and development, and its contributions to American society. The book is written in a clear, concise, and engaging style, making it accessible to a wide range of readers. It is a valuable resource for anyone interested in the history of the Evans family or American history in general.

At Monte Piccolo Games They Huff and Puff; in the Brass Orchestra They Play Bluff

electronic sound-ranging instruments during World War II submarine hunting.

Results of the study will, when completed, become available both in non-technical articles in the *National Geographic Magazine* and in technical reports to be contributed to world knowledge through universities and colleges at home and abroad.

The Medical Research Unit of the University functions in cooperation with the U. S. Veterans Administration and occupies quarters in the huge Veterans Hospital in Coral Gables, formerly the fashionable Miami-Biltmore Hotel. The Unit is built up as a nucleus for a school of medicine, long a dream at the University of Miami.

Although the administrative office is lost in a corner of the ornate ballroom of the former hotel, researches are conducted in modern laboratories completed this year. A corps of eminent researchers now is engaged in studies of compounds capable of prolonging the action of adrenaline secreted by the adrenal glands; compounds effective as antidotes to narcotics introduced into the human body in overdoses of sleeping pills; the effect of various drugs when used with insulin; transplantation of endocrine glands; effect of shock on kidneys; and causes of various tropical diseases.

Somewhat overwhelmed with the scope of the University's activities, its meteoric growth and its impact on Miami, I sought out Dr. Ashe to learn his views on the University's role in this ever-growing area.

#### Students from 46 States, 20 Countries

The University maintains a president's modern office in downtown Miami's chief commercial center, the Du Pont. Here also is the large room in which meetings of the Board of Trustees are held when the time-throated demands a downtown location.

But Dr. Ashe's principal administrative work is performed in the Administration Building, erected on the main campus by combining two old Army barnacks. It was here that I found him.

"We have now been in existence 24 years," he said. "We have some 12,000 full-time students from 46 States and 20 countries and approximately 2,000 students in the evening Adult Division."

"We have built on a permanent and well-placed campus of 260 acres several major educational buildings, several minor ones, and modern dormitory facilities. In addition it regular instruction in the College of Arts and Sciences, the School of Business Administration, the School of Law, the School of

Education, the School of Engineering, the School of Music, and the Graduate School, we have developed important research activities. These are in the fields of tropical agriculture and horticulture, experimental medicine, marine biology, and several of the laboratory sciences.

"Over the next few years we expect to push farther many of these basic researches and to add several additional schools. We must build a number of new educational buildings on the main campus, including a great new library building. Our library is growing at a terrific rate. We must have the first large unit of a spacious science building, a large auditorium, and adequate quarters for our students in music, drama, and art.

"Furthermore we need adequate endowments to help support the University. We are not tax-supported and earn most of our income.

"The community is growing very rapidly and has changed its character from purely a winter resort to a commercial and industrial metropolis. Agriculture in the back country has multiplied probably ten times in the last 20 years.

"It apparently will be necessary for this University to become quite large. We consider the first 24 years a period in which the University was established. The next few years should be a period of development and improvement."

The decisiveness with which Dr. Ashe summed up his views, his past record as a man unharmed by formidable problems, and the caliber of the men who back him up, his progressive Board of Trustees,\* conformed to inspire in me the feeling that even bigger things are in store for the University of Miami.

Although the University's influence is widespread, it would be a mistake to assume that it is responsible for all of Miami's cultural life. For example:

An outstanding musical organization in the area is the Miami Civic Music Association. For the last 15 years its president has been Charles H. Crailon in whose honor the area's newest public recreation park on Key Biscayne has been named (page 392).

This democratic assemblage of music lovers

\* Members of the Board of Trustees of the University of Miami: Bowman F. Ashe, Harry Hood Bassett, Samuel Black, Roscoe Brinkley, Oscar E. Thoburn, Jr., J. Eason, George C. Follis, Edmund Grossman, Edmund A. Hughes, John S. Knight, John Oliver, George Daniel J. Mahoney, Dr. Raymond H. Parker, Robert Portland, Jr., Fleming G. Kirby, Daniel H. Redfern, McGregor Smith, Arthur A. Tracy, and George F. Whitten. Honorary Member, William H. McKenna.

has a membership of 2,200 and a long waiting list. Six or seven concerts by world-famed artists are presented each season. No one connected with the association receives a salary. Last season artists appearing were the Robert Shaw Chamber; the Mariemma Dance Ensemble; the Sigmund soprano; Bruno Malschwitz, pianist; the Trieste Chamber Music Trio; Bruno Rabinoff, violinist; and Jussi Bjorling, tenor. Concerts are held in the Miami Edison High School Auditorium.

### Miami Hears Grand Opera

The Opera Guild of Miami, under the artistic direction and general management of Dr. Arturo Di Filippi, a member of the University of Miami faculty, has brought grand opera to Miami for ten seasons.

Miami music lovers contribute to its support, subscriptions ranging from \$2,000 down to \$10 annually. Miami singers and music students from the University make up the chorals and supporting casts; lead roles are sung by Metropolitan Opera stars imported for the occasion.

Last year *Carmen*, *L'Etour d'Amour*, and *Il Pagliacci* coupled with the *Secret of Sazanar* were presented.

Like any other civic opera organization, the Miami group constantly seeks funds to keep solvent. Dr. Di Filippi surmounted one crisis last season when he feebly proclaimed in the newspapers that a horse fared better in Miami than a singer, and that he wished he were a horse.

"Everybody would dress up and come to see me run," he added. "I would then cough out an operatic cadenza, with a snort at the end, that would bring me in a subsidy for the Opera Guild that I sorely need. Oh, what an operatic end that would be!"

The very next day Dr. Di Filippi received a check for \$25 from a sympathetic reader who observed, "Who could say nein to an appeal such as yours?" Other subscriptions followed to save the day.

Then there is the Philharmonic Society of Greater Miami, organized in Coral Gables, which makes it a point to feature south Florida artists and composers.

Barry College, located on an 80-acre campus in a pleasant suburb north of Miami, also makes a contribution to the area's cultural life. A Catholic women's college of liberal arts and sciences, it is celebrating this year the tenth anniversary of its founding.

Barry's Christmas oratorio and pageant, *Christmas Tryptich*, and its Passion oratorio for Palm Sunday, both composed by the

head of its Department of Music, attract audiences of more than 1,000. Once a year the Dramatic Department stages a serious play, such as *The Song of Bernadette*; in lighter vein, they give plays such as *Cinderella* for the children of the community.

About 15 percent of Barry's 289 students are from Latin America and Puerto Rico. They don the folk costumes of their countries to participate in Greater Miami's annual Pan-American Day activities (page 589).

The campus is famous for its tropical beauty, highlighted by a long double row of towering royal palms which extend westward from the entrance to a tiny chapel at the other end, and by brilliant, multicolored bougainvillea which overhangs the facades of classrooms and dormitories.

Among the thousands who have moved permanently to the Miami area in postwar years are many children, suddenly introduced to a subtropical region totally foreign to them. In most instances their parents find life just as new and hence are unable to answer hundreds of inquiries put to them by their young sons and daughters.

To remedy this situation, Miami's Junior League opened a Junior Museum last January. By May school children were visiting it at the rate of more than 3,000 a month. Also, the museum's natural history curator had lectured to 11,000 children in their schools.

A well-informed young woman accompanied us through the reconverted old mansion which houses the exhibits. Tours take from an hour to an hour and a half.

### Sparkles Stars at Junior Museum

Beginning in the Early Florida Man room visitors wove through the Seaside Gallery, always popular with the youngsters; pass through a natural history gallery where Sparkles, a ring-tailed monkey without rings on her tail, is a source of constant delight; and through other rooms devoted to primitive African crafts, Latin-American and Oriental curios and a coral exhibit. Next year the Museum will have a marine life exhibit.

In nearly every room, to rivet youthful attention, something alive is exhibited, including parakeets, tree snails and even snakes in well-protected cases. But Sparkles' only real rival for the children's affections is Mico, the goat, which is kept out in the yard. Educators are enthusiastic over the whole informative visual project (page 565).

For students and lovers of horticulture a visit to Miami's Fairchild Tropical Garden is an experience not to be duplicated anywhere in the United States (pages 572-3).

# Skyrapers But Growing More Fishes Harbor and Yachting

The new Alton was  
built on a small  
island in the harbor  
and is now a  
popular resort for  
yachting and  
fishing. The new  
Alton is a fine  
example of modern

[illegible][illegible]

Figure 1 is a schematic diagram of the experimental setup. It shows a cross-section of a polymer blend film. The top layer is labeled "POLYMER SOLUTION" and the bottom layer is labeled "POLYMER FILM". The interface between them is labeled "INTERFACE". The top layer is further divided into "POLYMER SOLUTION" and "POLYMER FILM" regions. The bottom layer is labeled "POLYMER FILM". The diagram illustrates the process of polymer solution evaporation and the resulting morphology of the polymer blend.

HISKEYE BAY, ATLANTIC & GULF RAILROAD WINDS THROUGH PALM GROVE INTO PRINCIPAL TOWN. A  
 small locomotive is visible on the tracks, surrounded by dense tropical vegetation. The scene is captured from a low angle, emphasizing the height of the palm trees.

The Montgomery Museum and Library on the grounds houses the Brett Memorial Library of more than 1,000 books on botany, architecture, and related subjects. Here too is exhibited a large array of articles made from palms from all parts of the Tropics—dowries, carved coconut shells, carvings, mats, musical instruments, fine sailcloths, fish nets, basketwork, and dolls.

Not far away is Matheson Park, stretching between the main roadway from Coral Gables and the shore line of Biscayne Bay. Its palm-shaded bathing beach and pleasant tropical picnic grounds attract thousands of Miamians the year round.

Opposite the park, on the other side of the roadway, lies a large undeveloped tract known

Miami Hammock. It is a preserve of primitive tropical growth in the Miami area. It is a natural state for botanists to study.

#### Face Lifting in Bayfront Park

Every visitor to Miami inspects Bayfront Park soon after arrival. It is in the foreground of every skyline picture made from the bay. But changes have been and are being made here to alleviate Miami's cultural growing pains (page 580).

Construction of a \$1,000,000 Miami Memorial Library, a two-story building of classical design faced in Georgia marble, is under way. Fifty yards off, a new \$50,000 bandstand has been completed (page 560). The front of the new structure gives the general impression of a giant sea shell. The huge stage accommodates more than 200 performers, and the orchestra pit has space for a 150-piece orchestra.

Here free band concerts are heard twice a week during winter and spring and once a week in autumn. Miami boasts that from October 1, 1949, to April 1, 1950, not a single concert was canceled because of rain or cold weather!

Another recent Miami transformation has taken place on Dinner Key, once a palm-shaded bit of land a short distance offshore from Coconut Grove.

Biscayne Bay's original settlement was in Coconut Grove, centering around Dr. Horace Porter's store, opened in 1870. By 1874 the town had a post office. The original settlers often paddled over to Dinner Key for picnicking, hence its name. During World War I the War Department filled in the intervening shallow water and made the key part of the mainland. Later it became an active naval base.

Then Pan American Airways arranged to

take the key as its International Marine base—scene of operations of the company's famous flying boats to Cuba, the Bahamas and South America. During World War II it was turned into a cadet training school where Pan American's seasoned operators taught American and English flying cadets navigation.

Now the city of Miami has acquired Dinner Key and transformed it into a convention site, with an Exposition Building seating 10,000 persons and containing a large restaurant. While I was in Miami, 10,000 Kiwanians descended on Dinner Key for their annual convention. The city also is building a municipal yacht basin at the key.

A stadium, primarily for baseball, seating 9,500 persons, has been completed at a cost of more than \$1,000,000. For the first time in stadium construction in the United States, architects covered it with a cantilever roof.

Most popular of all Greater Miami's recent developments for the pleasure of permanent residents and winter guests alike is Crandon Park on Key Biscayne. Cost of the park, and the 4-mile Rickenbacker Causeway from the mainland, exceeded \$1,000,000.

Heirs of the late Dr. W. J. Matheson deeded the north half of Key Biscayne to Dade County for public park use. The tract was named for Charles H. Crandon, long a member of the Board of County Commissioners of Dade County, in which Miami is located, and a tireless worker for the community's civic betterment. Development was delayed by World War II. Park and causeway were formally opened on November 9, 1947.

#### Fishermen Line Bridge Rails

I drove over the Rickenbacker Causeway one sunny May day, passing scores of fishermen, some of whom were actually catching fish from the railings of the bridges. Located just 10 minutes from downtown Miami, the park stretches along the key for more than two miles. Coconut palms flank the roadway. I turned into one of the huge specially made parking areas, left my automobile, and strolled to the charming ocean-front promenade and palm-shaded beach, which attracts thousands of bathers. Miamians point out that average winter water temperature is 72°.

Opening out in fan shape, on either side of the park's central esplanade, is a grove of buildings housing cafes and shops, well-ordered refreshment stands, and bathhouses equipped with lockers and rest rooms.

One of the most popular features is a miniature scenic railroad which winds through one and a half miles of tropical jungle (opposite). Bearing the imposing name of Biscayne Bay,

Atlantic & Gulf Railroad, the hub has an even more imposing list of 30 honorary vice presidents, each assigned to a particular "duty."

Among the vice presidents are: Bowman F. Ashe, in charge of cowcatchers; Long Crosby, section gangs; Douglas Fairbanks, whistle stops; David Fairchild, observation cars; Gilbert Grosvenor, rails; H. V. Kattenbarn, cabooses; Capt. Eddie Rickenbacker, traffic; Juan Trippe, communications; Robert R. Young, rolling stock; and, only feminine official, Lily Pons, whistles.

#### Meteoric Growth of Miami Beach

Most phenomenal growth in the entire south Florida area has taken place at Miami Beach, a strip embracing 7.1 square miles of land and 7 square miles of water, which lies to the east directly across Biscayne Bay from Miami and fronts on the Atlantic Ocean. The city of Miami Beach also includes a group of man-made islands in Biscayne Bay (page 590). Three large causeways connect Miami Beach with the mainland of Miami, two free and one toll.

In 1915 the town was incorporated. Today it is one of the world's greatest winter playgrounds. In 1915 assessed valuation of real property was less than a quarter of a million dollars; today it is \$250,000,000!

Twenty years ago Miami Beach had 61 hotels. Today its ocean front is suitably flanked by so many huge modern hosteries that one could stay in a different hotel every day for a year (page 563). Nine more, under construction, will bring the total to 374. In addition, there are 1,500 apartment houses.

Since World War II Miami Beach has entertained about 1,500,000 guests each year. They enjoy not only an 8-mile ocean-front beach, but 15 parks, playgrounds, and recreation centers, 138 private and public swimming pools; two public and two private 18-hole golf courses; 15 motion-picture theaters; and 431 establishments licensed to serve food.

In a small park and playground for children at Alton Road and Lakeside Drive stands a memorial of bronze and granite to Carl Graham Fisher, the man whose vision, courage, and millions built a great all-year resort. Its inscription succinctly tells the story of Miami Beach: "He Carved a Great City from a Jungle" (page 592). Before his death in 1939 Fisher had engineered four of the biggest real-estate developments of the eastern seacoast and had lived to see his dream come true.

Miami Beach also has a unique memorial to this one built on an island as sure as the next. It lay to another intrepid Florida pioneer. Both island and memorial were raised by pioneer

developer Carl Fisher to the memory of Henry M. Flagler, who brought the railroad to Miami in 1896, and continued it on to Key West in 1912.

The line to Key West was partially destroyed in the vicious hurricane of 1935. Since then it has been converted into the scenic Overseas Highway, over a large portion of the original stone and concrete trestlework, from Florida key to key, to the doorway of Key West. Thousands of visitors annually enjoy this automobile "voyage."

Flagler's ardor in developing south Florida bred Fisher's enthusiasm and prompted him to present the striking memorial to his own new city (page 590).

The rapid growth of Miami Beach as a resort center tends to obscure its cultural aspects, but they are unmistakably present.

Twenty-four years ago, for example, the Committee of One Hundred was formed. Members were executives of large and small corporations from the North and Midwest who had built winter homes on Miami Beach and adjacent islands. They wanted to form friendships in their adopted seasonal community among men with common interests.

They acquired a clubhouse which included an auditorium. Membership today is limited to 300. Every Tuesday evening over a period of some 15 weeks in the winter season the group gathers to hear prominent speakers brought from all over the country to address them on national and international subjects.

#### New Hospitals in Miami Area

In postwar years Miami has taken rapid strides to enlarge its hospital facilities. Dade County has 21 hospitals with 2,692 beds and 326 basements. The healthful year-round climate and Gulf Stream-charged air are highly beneficial to heart cases especially, who come from far and near.

Largest in the area is the 600-bed Jackson Memorial Hospital, recently taken over by the county and well on its way to becoming a modern medical center. A new \$2,500,000 building is being added to the plant, and State and Federal funds of more than \$1,000,000 have been provided for installation of a 100-bed psychiatric ward. A Latin-American wing is soon to be added.

Next largest hospital is the Veterans Administration Hospital, formerly the v. Miami-Biltmore Hotel, in Coral Gables.

The South Florida Children's Hospital, for boys and girls under 16 and for polio victims of all ages, opened last March. The main building was erected at a cost of \$875,000.

The new \$6,000,000 Mercy Hospital, built

Modern Facade Clothes a 24-year-old Steel "Skeleton" to Form U. of Miami's Morris Aronick Building

Islands viewed from Biscaya Bay 30 Nears N.W. View in background, higher N.W. corner the last Fleming's Head in foreground

These values are comparable with the values obtained by the authors of the cited papers.

The first part of the paper discusses the importance of the research and the objectives of the study. It then presents a literature review of the existing research on the topic. The second part of the paper describes the methodology used in the study, including the data collection and analysis techniques. The third part of the paper presents the results of the study, and the fourth part discusses the conclusions and implications of the findings.

Belle's Parrot Jungle
The Parrot Jungle

Brilliantly Plumed Macaws and Stray Parakeets Live Unleashed in Man's Parrot Jungle  
 With a few exceptions, the birds are not tame, and are not to be fed by hand. They are  
 all of the same species, and are all of the same color, and are all of the same size.

on land formerly a part of Vizcaya, the James Deering Estate (pages 595-604), is soon to be dedicated. Overall plans call for a 304-bed hospital, nurses' training school and home, and clinical buildings.

One of the late Carl G. Fisher's Miami Beach hotels, the Nautilus, which was transformed into a Veterans Hospital, now has been turned over to a nonprofit group of trustees and renamed Mt. Sinai. It has 255 beds and 50 basements.

Another new and well-equipped hospital is Doctors, built by a group of physicians on property adjacent to the University of Miami.

Individual private scientific research proceeds in many quarters in the area. For example, about 10 miles south of Miami William E. Haast has conducted a serpentarium for the past two years. Last May he brought back from India 370 cobras to add to his stock of Indian, Egyptian, and spitting cobras, and many other varieties (page 591).

To maintain his serpentarium, Haast charges admission to the public, but he is more interested in the scientific aspects of snake raising, including the extraction of cobra venom for use in serum.

#### Immune to Cobra Bites

In September, 1948, Haast started a program of self-immunization to cobra bites. He injected distilled raw cobra venom into his blood, beginning with a mild dose and gradually increasing it. In August, 1949 a cobra bit him without appreciable effect.

When he first started his program, he took a diluted injection every few hours. Now that he is immune, he finds one every three months is sufficient to keep him in that protected state.

The Miami area also boasts a parrot jungle and a monkey jungle. Both are commercial ventures, but neither could exist anywhere except in a subtropical area.

Scores of brilliantly plumed parrots fly free in their sanctuary, some willing to pose on spectators' shoulders and arms to have their pictures made (opposite). Parakeets and a flock of flashing lamprolaimas also dwell within the limits of this preserve.

Many varieties of primates, including Rock of Gibraltar monkeys, baboons, chimpanzees, gibbons, and mandrills, live in the monkey jungle.

Dangerous varieties are confined. But the large group of rhesus monkeys turns the tables on spectators here. Visitors stroll through caged passageways with the rhesus monkeys on the outside, looking in at the strange humans behind the wires.

To see another private scientific venture, I called on Mr. Charles Cranston, whose manifold interests include the Miami Civic Museum Association, development of the Dade County park system, expert woodworking, and avocado and mango raising, all in addition to his personal business enterprises.

I called to look into still another venture of this versatile gentleman—his earthworm-raising project!

#### Earthworms Born to Avocado Trees

As I entered the ample grounds surrounding his home in Coral Gables, I was impressed by the grove of heavily laden mango and avocado trees. Beneath each was a mulch of grass, weeds, and leaves.

"I never spray my trees," Mr. Cranston said. "My earthworms down under that mulch keep them healthy. When I first planted the trees four years ago, the soil here was white sand and I had to blast holes for the roots. Look at it now."

He pulled away the mulch to reveal the dark soil, enriched by earthworm castings. We went to the rear of the property. Here were huge compost piles, each with a sprinkler system over it to keep the compost—principally leaves, pine needles, and garbage—moist in dry weather.

"We're raising millions of earthworms here," Mr. Cranston said. "But we have to watch for their enemy, the mole cricket. It lives on them. It's larger than a cricket and harrows into the ground very fast."

Everything growing on the property is enriched with earthworm castings, including roseashes and Chinese labee trees.

#### Tests Against Florida Sunshine

For many years General Motors Corporation has maintained a Research Laboratories Division in Miami under the direction of Dr. Earl M. DeNoon, in cooperation with the widely acclaimed scientist and inventor Dr. Charles Franklin Kettering.

I visited the laboratories near the International Airport, where most of the work is done out of doors. Dr. DeNoon also operates here the South Florida Test Service, for other manufacturers. A host of materials is exposed to weathering and tested in the Florida sun.

From a weathering standpoint, few other places in the world have as interesting a climate as southern Florida. When a refrigerator manufacturer, for example, can produce an outlet crank on his product that will stand tests in Miami, he can be sure that it will stand up anywhere in the United States.

### A Banyan Tree's Descending Roots Strangle a Sidewalk in Coconut Grove

Not far from the famous New York hotel, the Hotel Astor, stands a grove of the ancient banyan trees, many of which are several hundred years old. A large number of the trees have enormous spreading canopies, and many of them have thick, gnarled trunks. Many of the trees have thick, gnarled trunks, and many of them have thick, gnarled trunks.

There were hundreds of such trees, and they were engaged in a great struggle, not only with each other, but with the ground. The trees were engaged in a great struggle, not only with each other, but with the ground. The trees were engaged in a great struggle, not only with each other, but with the ground.

A large number of the trees have enormous spreading canopies, and many of them have thick, gnarled trunks. Many of the trees have thick, gnarled trunks, and many of them have thick, gnarled trunks.

Many of the trees have thick, gnarled trunks, and many of them have thick, gnarled trunks. Many of the trees have thick, gnarled trunks, and many of them have thick, gnarled trunks.

Now the whole grove is being cleared away, and a project of a large new hotel is being planned. The project is being planned, and the project is being planned.

### Mann's Pan-American Vision

The great vision of Mr. Mann, which he has called for a long time, is now being realized. The great vision of Mr. Mann, which he has called for a long time, is now being realized.

The great vision of Mr. Mann, which he has called for a long time, is now being realized. The great vision of Mr. Mann, which he has called for a long time, is now being realized.

And when the great vision of Mr. Mann, which he has called for a long time, is now being realized, the great vision of Mr. Mann, which he has called for a long time, is now being realized.

# Vizcaya: An Italian Palazzo in Miami

By WILLIAM H. NICHOLAS

*With Illustrations by National Geographic Photographer Justin Locke*

ON CHRISTMAS DAY, 1916, when the late James Deering opened the doors of Vizcaya in Miami, Florida, he saw a dream come true. This American business genius had created in the New World an Italian palazzo, comparable only to historic Italian palaces of the 16th century.

By use of historic example and antique furnishings, and with extraordinary veracity, he had achieved a triumph in recalling a golden age of art and architecture. His new home reflected the splendors of Egyptian, Roman and Venetian residences, furnished in its entirety, as they were, in the chief decorative styles of more than four centuries ago.

Mr. Deering, an International Harvester Company executive, had traveled widely abroad. For 25 years he had collected in Europe architectural backgrounds, rare period furniture, textiles, sculpture, and ceramics. To enshrine them he built Vizcaya, as home until his death in 1925. His palazzo on Biscayne Bay became a repository of Italian decorative art unequalled in America. His art-buying heirs have kept it so to this day.

An army of 1,000 artisans employed Italian stonecutters, cabinetmakers, plasterers, painters, and gifted landscape gardeners built Vizcaya, their labors extending over five years. Mr. Deering purchased nearby quarries whence came the rough coral, cut and carved on the spot, for the palace walls. Little steel was used in construction.

Agents brought roofs of whole Cuban villages, replacing them with modern materials to obtain the weathered, hand-shaped effect for the palazzo roofs (page 598).

## Treasures from Historic Palaces

The architect, E. Burrall Hoffman, Jr., and Paul Chalfin, designed the building to accommodate the remarkable collection of antique doorways, wall panels, and ceilings removed from Venetian, Roman, and Milanese palaces.

Mr. Deering leased large warehouses in which he and the architects, over and over again, experimentally laid out and furnished room after room. The height of the second floor was determined by the size of a tall entranceway, with marble frame and wrought-iron gates, connecting the palazzo tearoom and the patio. This gateway came from the palace built for Niccolò Pisani and his son, Victor, during Venetian admiral's of the 14th

century when Venice was a great sea power.

Vizcaya's formal Italian gardens were planned to rival in detail and magnificence the landscape masterpieces of the Villa d'Este in Rome or the Villa d'Este in Tivoli.

How much did Vizcaya and its furnishings cost? Many estimates of the number of millions of dollars spent on the place have been made, but all have been pure guesses. Mr. Deering, who died a bachelor, never let it be known. What he was interested in was quality and artistic perfection.

No matter what the cost, Vizcaya could not be reproduced today. No longer is it permissible to remove art treasures permanently from European countries.

## Spanish in Name, Italian in Spirit

Although Vizcaya is Italian in spirit, the name is Spanish, after the same province of Biscay from which Biscayne Bay takes its name. The letters B and V are virtually interchangeable in the Spanish alphabet.

The crest above the huge entrance to the grounds on South Miami Avenue is a model of the Catalan *Vizcaya*, one of many successive royal Spanish ships to bear that name.

When Justin Locke, National Geographic staff photographer, and I visited Vizcaya, the National Geographic Society had been graciously accorded permission to make, for the first time, color photographs of the palazzo.

From the entrance we drove beneath arching tropical trees for several hundred feet. Then we turned into another tree-arched driveway and came to the oval-shaped forecourt, passing huge Venetian vase forms at its entrance. On our right a series of 17th-century gateway of curved pink marble and Istrian stone, framed in coral, led to an adjacent court. This gateway came from the Palazzo Revellon in Verona, built by Michele Sansovino, 16th-century Italian architect.

Stepping through the straight-door entrance to the palace, we faced a fountain group made up of a Roman bath of yellow marble, surmounted by a 17th-century Italian statue of Bacchus, god of wine, and flanked by carved infants astride sea monsters.

Presence of the ancient Roman bath is not incongruous. Pompeii and Herculaneum, buried in lava during an eruption of Vesuvius in 79, were excavated 17 centuries later. The ancient art thus revealed

gave a compelling impetus to revival in Italy of classic Greek and Roman design, totally forgotten during the Dark Ages.

The tall, graceful doors at either end of the loggia once stood in the vestibule of the Hôtel Beaumartin in Paris. This was the palace occupied by Napoleon's stepson Eugene, son of Josephine and a Martinique planter.

Through the doorway on our left we passed to the entrance hall. Its outstanding feature is its hand-colored wood-block wallpapers made by Joseph Dufour of Paris about 1814.

*Galerie Mythologique* is the title of the set, printed in shades of gray, with 24 strips depicting the Vengeance of Ceres, Phaethon and Apollo, Venus and Diana, the Judgment of Paris, Time and the Seasons, and the Muses. It is the only known Dufour set of this pattern in America.

The library, or Adam room, shows the classic design in furniture developed by the Adam brothers of England. The brothers traveled widely in Italy during the classic revival, and it made a profound effect upon them. This is reflected particularly in a fine Corinthian mantel, over which an ancient Roman mosaic has been set into the wall.

A rare set of chairs in this room once belonged to Pauline, sister of Napoleon, who wed the Roman prince Camillo Borghese in 1803 and promptly refurnished his 200-year-old palace in the classic style.

#### 18th-century Salon

The style of Vizcaya's 18th-century salon is Louis XV, particularly as it was developed in Italy (page 601). The size of the room was determined by the plaster ceiling, which once graced the Palazzo Rossi in Venice.

French design then was making its impact on Italian style, and vice versa. These decorative styles reflect the trend from the era of dignified, courtly Louis XIV, builder of Versailles, to the lovely but artificial and frivolous designs which developed under his great-grandson, Louis XV, and flourished to a lesser extent under Louis XVI and Marie Antoinette.

Rococo comes from the French word *coquille*, or "shellwork." The decorative scheme is a lavish mixture of carved and painted shell-pierced shellwork, scrolls, and foliage.

We found a continuation of rococo in the music room. Ornate ceiling and paneled, painted canvas walls came out of a Milanese palace. The lavishly decorated spinet was built in 1645 by Horatius Albano; the gilded either is a century later; the harp is carved and decorated in floral style.

Two magnificent rooms turn time back to the period of the Italian Renaissance.

Once, the great Renaissance hall, we entered by a small doorway, easy to defend, for in the 16th century large houses still were built somewhat in the manner of fortresses. One end of the hall is taken up by a huge stone chimney piece, a notable example of French Renaissance sculpture (page 603).

Most notable of the wall hangings is an Italian tapestry, woven about 1550 for Duke Ercole II of Ferrara, depicting Hercules killing the Nemean lion. Was the weaver flatterer the Duke? Ercole is Italian for "Hercules."

A massive 15th-century Italian sideboard in the other Renaissance room, the banquet hall, once held church vestments (page 599).

The handsome 15th-century Italian chimney piece is carved of dark sandstone from hills near Florence, in the style of sculptures in the court of Lorenzo de' Medici.

The east loggia is distinguished for its sage cedar doors, encrusted with bronze leaf and installed in marble frames. Doors and frames came from an old palace in Rome which was acquired by the Turlurias, great Roman banking family.

The intricate wrought-iron chandelier of the upstairs dining room was removed from an Italian palace. The wall murals are by Claude Joseph Vernet, French painter of marine scenes for Louis XV. A mantel is decorated in lacquer in the Chinese manner (page 600).

Vizcaya's gardens, in formal Italian treatment, are unduplicated in America (pages 597, 602, and 604). With the palazzo at one end and a small casino upon a mound at the other, they are conceived as a vast room walled in with formal vegetation and forests.

The floor of this garden room is an ornamental and diversified arrangement of beds and plots, with trimmed borders and pleasant paths, flanked by statues and fountains. No frolic vegetation out of keeping with Italian gardens has been permitted to intrude.

Strolling through the gardens, we came at length to the sea wall. We looked out upon a huge stone barge breakwater, embellished with statues and pilars (page 598). All the sculpture on the barge was designed by A. Stirling Calder, eminent American sculptor.

As in the palazzo itself and as in the formal gardens, the barge carries out in conspicuous detail Mr. Deering's aim to recreate faithfully on American soil an Italian palazzo.

The citizens of Miami and all southern Florida have good reason indeed to be proud of majestic and artistic Vizcaya.

# Baltic Cruise of the *Caribbee*

By CARLTON MITCHELL

**WHEN** a pleasant dream comes true, it is a pleasant dream indeed.

No sooner had my wife Zib and I returned to Annapolis after cruising the islands of the Caribbean\* than we began to dream about the skerries (little islands) of the Baltic.

"It's cold up there," warned one friend.

"Pilotage is difficult," said another.

"There are unswept mines," contributed a third.

"The Cold War will engulf you," added a chorus.

But the idea persisted. We thought of the archipelago around Stockholm, hundreds of little islands flowering in the brief summer; of isolated Finland and its courageous capital, Helsinki; and the storied walls and battlements of Sweden's ancient Visby and Kalmar.

True, the Iron Curtain had already closed off our shore of the Baltic; newspapers carried headlines that showed hazards were not all navigational. And we could learn of no other American cruising yacht that had ventured into the Gulf of Finland since the war.

## Cruise Begins at Oslo

However, on the afternoon of July 12, 1949, the United States ensign flew jauntily from the sterns of two yachts lying off the Royal Norwegian Yacht Club, Oslo. On one mooring was our *Caribbee*, on another *Argyll*, owned by William F. Moore of Oyster Bay, New York, our cruising companion for the summer. Both were ocean racing yachts, fast, able, and comfortable.

That morning the yachts had gone overboard into the waters of Oslo Harbor from the foredeck of the S. S. *Moemartzen* (page 615). Masts and rigging were in place, the stains of shipping from New York removed.

We had chosen Oslo for the start of the cruise so that we could sail down its beautiful fjord and cross Sweden by the famous Gota Canal. I had always wanted to see rural Sweden from my own deck and sail its lakes in the mountains (map, page 608).

It had been ten years since Zib and I visited Oslo. Our last memory was of Karl Johans Gate, the principal avenue, thronged with silent crowds while sirens howled the first practice blackout. Since then Norwegians have weathered war and occupation. Yet we found their lovely capital little changed. Shops were well stocked, restaurants crowded.

Every weekday evening steamers carrying commuters to their homes on Oslo Fjord race dramatically for the harbor narrows (page

625). We dropped our lines and followed the flow. There was no wind, but the sky was cloudless, of the deepless blue found only in high latitudes. Oslo was red and white against a background of pine-covered green slopes.

About 15 miles below Oslo, where the fjord narrows, we passed the small island of Kahlolm. Soldiers inspected us from lookout towers. Hidden in the rocks were bunkers, narrow eye slits barely visible.

## Where Nazis Got a Surprise

These were the guns that upset the time schedule of the Nazi invasion of Norway. When the cruiser *Bucher* came abreast, the fortress opened up. Surprised Nazi generals drowned in dress uniforms donned for the grand entry into Norway's capital.

A few miles farther we saw a rusting monument to the Norwegian underground movement—the German freighter *Doson* lying at a steep angle on the shore. While this troop transport lay at Oslo, the resistance hero, Max Manus, worked for three days under the dock among rats and filth attaching homemade Carpet mines to her hull.

When she was well down the fjord, the mines blew holes in her bottom, and her commander drove her on the rocks full speed. However, all those in the afterpart of the ship, including many Nazi soldiers going home on leave, were lost.

Last night we anchored behind Hankoy, a center of Norwegian yachting. The Crown Prince has a house perched on a hill overlooking the harbor. He is an ardent racing sailor.

Beyond Hankoy—literally "Hank Island," as the term is put by means "island"—Oslo Fjord widened into a huge bay. Just after lunch, at 1:02 Saturday, July 16, I took bearings and found we had crossed a watery border and entered Sweden.

For the night we stopped at the fishing village of Havsten-sund. As we sat in the cockpit talking over our navigational problems

### Cranes Bristle Like Oil Derricks above Göteborg, Sweden's Atlantic Gateway

Large cranes, like oil derricks, are the main feature of the industrial landscape above Göteborg, Sweden's Atlantic gateway. The cranes are used to load and unload ships, and the ships are used to transport goods to and from the city.

As the day wore on, the wind died down, and the sun came out. The water was calm, and the ships were at anchor. The cranes were still working, but the atmosphere was peaceful. The city of Göteborg was visible in the distance, and the water was a deep blue.

### Sweden Crave the Sun

Sweden is a country where the sun is much needed. The people of Sweden love the sun, and they will do anything to get it. They will go to the beach, or they will go to the mountains. They will do anything to get the sun, and they will do it with a smile.

I had heard that Sweden was a cold country, but I was wrong. The weather was perfect. The sun was shining, and the water was warm. I was in luck. I was in Sweden, and I was having a great time.

A number of the best swimmers were here. They were in the water, and they were having a great time. They were swimming, and they were playing. They were having a great time, and they were enjoying the sun.

Why did I go to Sweden? This was the reason. I was looking for a place where I could enjoy the sun, and I found it in Sweden. I was in luck. I was in Sweden, and I was having a great time.

One day, I went to the beach. The water was warm, and the sun was shining. I was in luck. I was in Sweden, and I was having a great time. I was swimming, and I was playing. I was having a great time, and I was enjoying the sun.

But the Vikings were not often pursued. They controlled the northern seas. They sailed with pleasure and confidence, and they were not afraid of the Vikings.

As we raised our eyes to Marstrand, we noticed that the Vikings were not there. They were not in the water, and they were not on the shore. They were not there, and they were not coming.

## Sula Limp, a Model Ship Sailed Becalmed on a Glassy Sea in Gatcheng's Marine Museum

When we stepped out onto the deck of the Sula Limp, the ship was becalmed on a glassy sea. The ship was a model of a Swedish sailing ship, and it was the only one of its kind in the world. The ship was built in 1780 and was the last of its kind. It was the only one of its kind in the world.

### *Caribbea* Anchors Off Helsinki, Where the Americans Received a Rousing Welcome

Helsinki was warmed again to about 30 degrees south of the Arctic Circle (page 261). It stands in position close to the 60th parallel, and is the capital of northern Finland, and its neighbor, Sweden. The skyline's most prominent features are the Great Church, the cathedral, and an apartment house.

He was called. His thick and flowing locks became a mass of snow.

Finally, in 800, he won the Battle of Hov, and he was swifter, crushing a resistance and ending Norway. He married Gyda, but they did not live happily ever after. He married and divorced several wives, ruled for 40 years, and founded a line of kings that lasted four centuries.

#### Göta's Locks, a Giant's Staircase

In the afternoon we reached the foothills and out past locks. Ahead, we stared at a giant's staircase, a series of locks stepping up the hillside. These water elevators by-pass Trollhattan's harnessed waterfalls, which provide power for much of southern Sweden.

A 100-mile canal is divided into three parts: the first, a deep section for ocean-going

ships, from Göteborg to Lake Vänern; the second, a series of connecting canals; and the third, a thin waterway for small boats to the Baltic. The total length is approximately 240 miles, of which 50 were dug by man. There are 64 locks all told.

By dusk we had climbed the water stairs and anchored in Lake Vänern. While the crew swam, Zib put the final touches on a *smörgåsarbete* she had spent the afternoon preparing.

She was worried whether her efforts with local dishes would win approval of Swedish friends in our crew. They ate herring with dill, heating with sour cream and chives; or ring with onions; sardines, anchovies; or shrimp to be eaten shells and all. There was salmon, smoked reindeer, smoked herring, radishes, sliced tomatoes, fresh vegetables.

### A Vacationing Swedish Family Sails Through Göta Canal on a Folkboat

North Carolina's public health care system is a complex of public and private health care services. In 1993, the state's health care system was valued at \$10.5 billion, with \$4.5 billion in public health care services. [illegible]

...watch it as go through. People ran from houses and worked. Very few American flags had ever passed; none since World War II (pages 618, 619).

Our canal crawling was aided by rubber

at once we attained our objective at 11:25 a.m. I have set level for a 3000 ft. temperature of 100° at this spring, famous for its iron and sulphur, and Lake Kootenai. To reach this we had to descend the 15 locks of Kootenai, the most spectacular of all of the Columbia River locks.

Our Last Trick—But It's Ahead!

From the highest hill in the canyon, the wall was almost vertical. Far below we saw blue water and dwarfed cacti. I wondered what would happen if a gate failed, letting the waters pouring over

The above study is consistent with the results

Swedish soldiers who had helped build the canal. But to me their memorial was the canal itself, still of service to Sweden.

Beyond, at Mem, we passed through the final lock. Suddenly I realized that the water under us was from the Baltic. Another dream had come true.

But our proper introduction to the Baltic really came a few miles beyond. The canal had opened into the wooded bay of Slutskan; in turn, this narrowed, and on a low point stood a gray stone tower.

Sten Schaeffer, a Swedish friend who was sitting beside me in the cockpit, told its story:

"That is Stegeborg. In 1200 it must have looked just like that, but later a whole castle was built around the original tower. Kings lived there for centuries. Then after Karl X died in 1660, it was eventually abandoned.

"When a new Royal Palace was constructed in Stockholm, Stegeborg Castle was torn down, stone by stone, and shipped to Stockholm. But the workmen found the old tower too solid to break up. So the first part of Stegeborg is also the last."

We sailed through the narrows, Argyll leading and anchored for the night at Arkösund. We were in the Baltic skerries of Sweden.

Imagine thousands of islands of all shapes and sizes, scattered at random across sparkling blue water, with deep channels between and quaint harbors behind each headland. Picture pebbles, stones, coral, and the like, scattered on brown rocks, and white sails against a blue sky. Those are the skerries, spread like pebbles on a beach along Sweden's shores and Finland's south coast.

We loated through these islets with warm fair breezes, guided by perfect charts and a confusion of navigational aids. A friend aptly describes this sailing in the skerries as "walking in the garden."

Here we had no long passages or heavy seas, no worries over savage squalls. This is to ocean cruising what roaming in a cottage garden is to climbing Mount Everest—a sailor's Garden of Eden.

However, we wanted to have a look at the open Baltic, so we laid a course for Hävringe Lightship and then the peninsula of Landsort.

#### Russian Patrol Craft Close By

As we sailed along rolling slightly to a small beam sea, the Swedish radio added a disconcerting note. A broadcast reported that, a few days before, Russian warships were manuevering between Öland and Landsort, almost where we were. It also relayed a warning by the

Finnish Government to stay well clear of the Russian zone of Porkkala in the Gulf of Finland. Five small sailing yachts, blundering inside the buoys, had recently disappeared.

As in the Bahamas, so far to the south and west, there was virtually no compass variation. We were almost exactly on one of those isogonic lines where the needle of the compass points toward true north, or the North Pole.

However, we were not without some uncertainty, as the chart indicated numerous circles of local magnetic disturbance. One, not far from our path, showed a possible error of plus or minus 60 degrees, probably caused by an enormous deposit of iron ore.

Argyll and Curibee parted company at Landsort. Bill Moore continued outside, while we continued our walk in the garden and approached Stockholm by way of Lake Mälaren. It was worth the detour.

#### Old Stockholm—"City within Bridges"

Our first impression of the Swedish capital was from the lake in front of Stockholm's Town Hall, called by some "the most beautiful building since the Renaissance." From our deck it was breath-taking. The three golden crowns of Sweden soar into the sky above its soft red tiles (page 631).\*

Stockholm is a city worthy of its Town Hall. Much is extremely modern architecturally yet there is an Old Town, one of the most perfect examples of medieval Europe in existence (page 630). As the original Stockholm sprawls across an island, it is called the "City within the Bridges." The old heart is surrounded by a new body.

I have never met a returned traveler who did not like Stockholm. Its location is superb, rising above a pattern of sparkling waterways. These, with parks and wide streets, give it an air of spaciousness and livability.

Its people are courteous and hospitable. There is a gracious civilization. Eating is a ritual. Tables groan with the assorted delicacies of the *smörgåsarbord*, the "bread and butter table." Nothing could be a greater understatement! (Page 609.)

When fresh-water crawfish *kräftor*, come into season, the city—and all of Sweden, for that matter—goes on a crawfish spree. Every restaurant blossoms with *kräftor* tablecloths, lamps, and kindred decorations.

Stockholm is also a city of museums, castles, and churches. High above the city lies Skansen Park, where houses of every period of

 (The boat in the foreground is the "Yacht" and the boat in the background is the "Lake Kroon")

Swedish history have been brought, rebuilt, and refurnished. Visitors literally walk back through the centuries.

Some churches recapture the past, too, especially Riddarholm, the Westminster Abbey of Sweden. Here the kings and the great lie under banners and in magnificent tombs.

Unfortunately, our luck with the weather ran out on our arrival. The rains came down in limitless quantities, so we moved *Caribbee* and moved to a hotel. A local paper cartooned a sports event in the stadium—gymnasts performing in deep-sea diving suits!

Then came a change for the better. All the way from Oslo we had had sunshine but little wind. Now our luck became even better; we still enjoyed the sun, and strong S.E. breezes as well. No sooner had *Caribbee* cleared the mooring basin than the overcast melted away; so we hoisted working sails and tore through the passages at maximum speed.

Swedish people take advantage of Nature's blessing. Nowhere are there more little boats. As we came through the narrows at Sandhamn, we saw hundreds of boats lying in front of the Royal Swedish Sailing Club. We had arrived for Sandhamn Regatta Week, one of the biggest yachting events of Europe. It was the one date that Bill Moore and I had planned our summer cruise around (page 632).

Thus began a memorable few days. Our welcome was swift and complete. We had hardly anchored before a representative of Commodore Jacob Wallenberg brought out an invitation to dinner. Each night there was another dinner, and formal dances inside the clubhouses or folk dances on the lawn.

#### Swedish Families Summer Afloat

To the Swedes any boat is a cruiser; whole families spend the warm months on craft the size of our smaller racing classes. Sailors pick a likely spot and tie up to shore—like a croaking fire on the rocks, eat picnic style, and sleep in the cockpit under a canvas tent. At Sandhamn several hundred were doing just this and racing each day besides (pages 633, 634, and 634).

To join in the racing, Bill chartered a sloop of the international 6-meter class. Zeb and I took a sailor's holiday and crewed in races against boats from Sweden, Norway, Finland, and Great Britain.

On the final day *Caribbee* hoisted sail for the resort of Saltsjöbaden, another yachting center. From the walks around a large hotel people watched our approach. It was a moment for stylish seamanship.

A mooring off a large waterfront building lay empty. I carefully planned my approach:

house forestaysail and tuzzen, a quick turn into the wind, then mainsail down, mooring picked up. Simple! Except, when I spun the wheel, I happened to look up. It was the ladies' bathhouse, one of those hazards to navigation. *Caribbee* missed the mooring by a boat length.

Here began the finest sailing I have ever known. Both *Legall* and *Caribbee* got under way with the first glow in the sky. It was calm. Soon a breeze came in fresh and true from the southwest. We set every light sail that would draw. We boomed through the skerries, sunlight dancing on the water, the islands like green jewels in a silver setting.

Even one who loves the Tropics must concede there is nothing so fine as a spell of good weather in high latitudes. The air is crisp, and warm in the sun, cool in the shade. By day the sky is deep blue, by night the stars are dazzling. Thus we sailed the skerries of Sweden and Finland.

#### Baltic Water Nearly Fresh; No Tides

The Baltic has a special charm. It is called a sea, but is more like a lake, as indeed it was during one geologic period. Connected with the Atlantic only by straits between Sweden and Denmark, yet fed by the heavy rain and snowfalls of the northern forests, the water is virtually fresh. There is almost no tidal rise and fall, so few strong currents.

During the summer the sea is usually placid, but winter gales make it one of the most dangerous bodies of water on the globe.

At Söderarm Light we suddenly popped out of the skerries into the Åland Sea, a small segment of the Baltic. We set a compass course. The spinnaker pulled hard. The coast of Sweden began to dim, that of Finland to rise.

It was a crossroads old in history. Here sailed the Goths, that restless and aggressive people who overran much of Europe and helped to destroy the Roman Empire. Here crossed the boats of the eastern Vikings. Here cruised the fleets of Peter the Great.

Rapidly we raised the shores of Åland Island. As we neared its principal port, Mariehamn, the spars of a square-rigged ship towered above the trees. I should have been disappointed had it not been so, for this lay and remote spot was the last home of the big sailing ships.\*

# Fences, Fountains and Wesley Centre Bishop's Wife front

The Bishop's Wife front is a fine example of the architecture of the early 20th century. The house is a two-story building with a prominent front porch supported by square columns. The porch is enclosed by a decorative railing. The house is surrounded by a well-manicured lawn and a variety of trees and shrubs. The architecture is a blend of traditional and modern styles, with a focus on clean lines and functional design. The house is a testament to the skill and creativity of the architect and the craftsmanship of the builders.

The Ice Melters Helped Themselves to Free Water. It Drove Their Ships and Crabs into

the sea. The windmill is a relic of the old days. It was built by the first settlers. The ice melters helped themselves to free water. It drove their ships and crabs into the sea. The windmill is a relic of the old days. It was built by the first settlers.

In the harbor of the coastal Erikson refitted the sailing ship and the waters of the coast. The windmill is a relic of the old days. It was built by the first settlers. The ice melters helped themselves to free water. It drove their ships and crabs into the sea. The windmill is a relic of the old days. It was built by the first settlers.

Now the windmill is a relic of the old days. It was built by the first settlers. The ice melters helped themselves to free water. It drove their ships and crabs into the sea. The windmill is a relic of the old days. It was built by the first settlers.

The windmill is a relic of the old days. It was built by the first settlers. The ice melters helped themselves to free water. It drove their ships and crabs into the sea. The windmill is a relic of the old days. It was built by the first settlers.

As we came to the shore in the shadow of the windmill, we saw the old Erikson. The windmill is a relic of the old days. It was built by the first settlers. The ice melters helped themselves to free water. It drove their ships and crabs into the sea. The windmill is a relic of the old days. It was built by the first settlers.

On Aland we hired an automobile and drove through the country. The windmill is a relic of the old days. It was built by the first settlers. The ice melters helped themselves to free water. turned the windmill. We shivered at the thought of the hardships of the winter. The windmill is a relic of the old days. It was built by the first settlers. The ice melters helped themselves to free water. It drove their ships and crabs into the sea. The windmill is a relic of the old days. It was built by the first settlers.

Despite a series of wars and devastations of their towns and the loss of territory and huge reparations imposed by the Russian, the Finns are cheerful and move forward as a free and independent nation.

#### Sherries Like Spilled Pepper on Chart

Being in the middle of our way led to the coastward through a land of unbroken variety and productivity. The windmill is a relic of the old days. It was built by the first settlers. The ice melters helped themselves to free water. It drove their ships and crabs into the sea. The windmill is a relic of the old days. It was built by the first settlers.

introduced gradually to skerry piloting. We could take advantage of ideal sailing conditions.

The water was smooth in the archipelago, and both boats carried every sail that could be hung from their masts. At one narrow spot a small boy called in Swedish from the shore, "Do you go with a motor?" Our tall masts were catching breezes not apparent to me, and the boy could not understand our speech.

Finnish skerries differ from those of eastern Sweden: they are of reddish-brown rock, worn smooth by ice and winter gales. Small ones look like whales sunning on the surface. Those nearest the Gulf of Finland are barren, but along the inner fairways most are heavily wooded.

We anchored each night. One stop was at Keisar Hamnen, Tsar Harbor, a snug cove between two islands. It had been a favorite of Alexander II, Tsar of Russia and Grand Duke of Finland.

Once he asked an old woman named Stina if she had fish to sell; she handed him the rope to her fish boat while she copped inside. The attendants were horrified: Tsars weren't given lines to tend! But this Tsar was amused. The old lady became famous as Keisar Stina, and the royal yacht bought fish from no one else.

#### Hangö, Western Outpost of Asia

At the southwestern tip of the Finnish mainland lies the port of Hangö. It was held by the Russians during 1940 and 1941, following the first "Winter War," when Finland defended herself with such surprising success. Hangö might be called the western outpost of Asia; beyond it the huge mass of Russia stretches off to the Pacific.

Buildings were palatial and pocked by shrapnel and bullet. Reconstruction was going on. A new town hall was rising on the foundations of the old, destroyed by fighting.

On the waterfront we were shown a monument to German soldiers who landed there in 1918 to help the Finns drive Red troops from Helsinki. After the Russians got Hangö in 1940 they removed the monument; when the Finns returned in 1941, they restored it. But in the Moscow agreement of 1944, when Porkkala was leased to Russia for 50 years, the monument was removed again.

Heavy drift ice closes the Gulf of Finland to steamers. Traffic bound for Helsinki formerly used the skerry channels, kept clear by icebreakers. But the Russians closed these protected fairways so now steamers

must use the inferior port and channels of Hangö during the winter.

On the third afternoon beyond Hangö, a Finnish friend piloted us to a lovely island where his family has a summer home. After we had safely moored, *Caribbee* and *Atgilt*, he introduced us to a Finnish bath.

Stones had been heated in a closed room and water poured on to create steam. We lay on raised wooden benches. Within minutes perspiration gushed from every pore. We slapped each other with birch boughs dipped in water and momentarily laid on the stones.

Afterwards we lathered with soap, then swam.

During the winter Finns end up by rolling in snow or taking a plunge through holes chipped in the ice, but it was cold enough for me right then!

That night we ate huge platters of *kräfft* and sang the Swedish songs we had learned. But none of us could quite forget being in the shadow of the Kremlin. Just six miles to the east lay the forbidden zone of Porkkala, 150 square miles in area and extending well offshore. No one knows what is happening inside.

#### Skirting Finland Through a Fold in the Iron Curtain

Here, as elsewhere, the Iron Curtain is impenetrable. Finnish trains pass through with their shades tightly closed, drawn by a Russian engine. Boats are not allowed to go through the island passages. Frequently Finns living near by hear sounds of blasting, indicating that the area has been heavily fortified.

On the other side of the Gulf of Finland, little more than 20 miles away, the Estonian island of Naissaar has also been fortified. Thus Russian guns command all ships moving in or out of the Gulf of Finland. Peter the Great is supposed to have conceived this plan to "put a cork in the bottle."

So when we left the next morning for the final run to Helsinki, we sailed through this fold in the Iron Curtain. We felt unfriendly eyes following our boats with binoculars and radar screens.

To prevent craft straying within the Porkkala zone, the Finns maintain a wide semicircle of floating buoys. When we picked up the first, we could make out details of the shore beyond and see high towers. Simultaneously, we made out a vessel coming toward us. At first she was just a speck, but as we watched through binoculars she grew rapidly. It was a moment of apprehension.

*Caribbee* happened to be in the lead. We

hoisted our American ensign. We could see no log on the strainer, but she was obviously a naval patrol craft.

When about 200 yards away she made a sudden turn to parallel our course. At her stern snapped the Finnish colors. They looked very good to us.

We clipped our ensign and she returned the salute, her crew standing rigidly at attention, despite a heavy roll.

If any Russians watched, we gave them a good show, for both yachts were carrying full-bellied jibs and ruzzed staysails while the wind piped fresh (page 620). Our two-hat ocean race carried us well out into the Gulf, within sight of Naissar. For a while, as the log put it, "only Naissar was in sight."

Then the Helsinki Lightship appeared over the horizon. We had run the Soviet guntlet. When we picked up a mooring off the yacht club, we were six degrees from the Arctic Circle and less than 200 miles from Leningrad.

#### Helsinki Recovering from War

We lay in the center of Helsinki. From our decks we could see the market place and the Government buildings and passing traffic (pages 620, 636).

Helsinki struck us as typical of the nation.\* Many buildings, even the President's Mansion, lacked paint; this was not a sign of neglect out of honor. Finns are paying off their debts, reconstructing necessary buildings. Fresh "make-up" can come later. Some travelers find this Helsinki depressing. To me it was just the opposite.

Hill Moore had visited Helsinki two years before. Store shelves were bare and restaurants sore limited. Now stores had a good stock and food was plentiful. Possibly no other war-torn country in Europe has shown a more remarkable recovery, and without substantial outside aid.

Everywhere on the cruise we were well received. People in Norway and Sweden seemed genuinely pleased to see the American flag floating from the sterns of two yachts. Crowds gathered whenever we docked. Passing boats would wave and salute. But in Helsinki our welcome was complete. Finnish hospitality was boundless.

#### Finns Hope for Olympics in 1952

Finland is scheduled to be host to the Olympic Games in 1952. Preparations were going forward for the reception of athletes and visitors. The stadium and hotel under construction symbolized to us Finnish courage and determination.

Once before, in 1940, the Finns had prepared for the Olympics. Then the games were canceled because of the attack by Russia in November, 1939.

My only complaint about Finland stemmed from my usual difficulty with language. Here I had to struggle with not one tongue but two, as every sign, every map, every street name, appeared in both Finnish and Swedish. Even *Helsinki*, *Suomi*, becomes *Helsingfors*, *Finland*, in the Swedish tongue. This is a heritage from the long Swedish rule and the hundreds of Swedish families who remain as part of the nation.

There was another rainy spell while we were in Helsinki. With the wind seemingly fixed in the southwest, "on the nose" going back, we expected a hard thrash out of the Gulf of Finland and down the Baltic. But the day before we left skies cleared and the wind shifted.

"A dry easterly!" exclaimed Finnish friends. "You have luck!" Fair winds from Sweden to Finland, now the wind was to be "on our tail" homeward bound.

Markers of Porkkala fell astern, again without incident, and we took off the lighthouses on the Finnish coast: Jusari, Russari, Uto.

#### Baltic Sailing—Woolies by Night, Shorts by Day

It was cold after the sun went down. As we angled out into the Baltic, a short steep sea kept the decks wet. During the afternoon the wind had backed into the north, and it blew hard during the night.

"If this is August, I wouldn't want to be here in January," said Walter, our professional seaman, as a polar wind knifed through us as if woolly clothes.

Next morning the wind lightened. By 4 in the afternoon I was stripped down to shorts from Bermuda and a Naissar straw hat!

The fabled island of Gotland lay ahead. We had covered 270 miles in 35 hours, a rousing sail across open water, very satisfying after peacefully "walking in the garden." The course had been circuitous to keep us well clear of the Soviet-controlled Estonian and Latvian coasts.

Again we sailed in the wake of ghostly ships.

Once these waters had been furrowed by the keels of eastern Vikings, the Rus. These hardy Northmen are not so well known as those who ravaged the Atlantic shores, but

\* See "Helsingfors—A Contrast in Light and Shade," by Frank P. S. Gilman, *National Geographic Magazine*, May 1937.

striking is the number of magnificent churches in various states of preservation.

In the narrow streets we relived bygone days: men-at-arms moving by torchlight, the town quiet behind its wall and moat, all approaches closed except the "Lovers' Gate" through which young couples were permitted to stroll into the country.

Our next destination was the island of Öland, close to the mainland—not to be confused with the Finnish Åland Islands. We left Gotland just as a fiery sun disappeared below lavender clouds. With the dark came a fresher wind, and soon the lights of the coast appeared. It was dawn when we dropped sails in Borgholm Harbor.

Above loomed a castle, a huge and forbidding pile, one of the most impressive ruins in all northern Europe. Certainly its magnificent courtyard, large enough for a game of polo, is on the grand scale and conveys a sense of regal pageantry.

As I wandered around, I was annoyed by names scrawled over every wall. Then I spotted a glass plate protecting a name scratched by a previous tourist: "Nils J—, Aug 11, 99."

#### Kalmar Controlled Sweden in Early Days

The Baltic is ringed by castles. But none seem as beautiful as Kalmar Nyckel, or Kalmar Key, a few miles beyond Borgholm, across the strait. For centuries it was known as "The Lock and Key of the Swedish Kingdom." He who held Kalmar controlled Sweden (page 640).

As we walked its corridors, I thought of the great drama it witnessed in 1397. Gifted Queen Margaret of Denmark brought Norway, Denmark, and Sweden together in the Kalmar Union, a federation successful only during her lifetime. And I pictured mad King Erik XIV working as a carpenter on the inlaid paneling of a second floor room while he awaited the reply of Queen Elizabeth of England to his marriage proposal.

Bill Monte and I planned a course directly for the Danish island of Bornholm. But our eye caught tiny dots of land on the way, a group called Christiansø. Two parallel islands formed a harbor. We decided to explore it.

A little past midnight we picked up close ahead Christiansø light. It was utterly dark. A lig ses was running. To enter we had to stay exactly in the white sector of the light; there were rocks on both sides of the channel. Cautiously we went ahead. A flashlight showed a stone breakwater close ahead.

We were not disappointed in Christiansø. The harbor was not much wider than the

boats were long. Only 160 people live on the island. Theirs is a rugged existence (p. 641).

During heavy northerly gales the seas surge through the harbor. Two years before, waves broke three feet deep along the quay. The whole village tended the fishing boats day and night.

Once strongly fortified, Christiansø is administered by the Danish Navy, which rents 18th-century houses and barracks to fishing families. Nothing except a lighthouse has been built here for 100 years (page 641).

Old fortifications bristle everywhere, rusted guns point to sea. Strangely, such islands with a military past are often the most peaceful and forgotten.

#### Borgholm—"Cork" in the Baltic

Borgholm lay 11 miles to the southwest. As we approached, we saw a rolling countryside of green and brown fields broken by the red roofs of twin towns, Sandvåg and Alänge. As we rounded the northern point, the scene changed abruptly. The west shore rose steeply in wooded cliffs, surmounted by the imposing ruin of Hammershus fortress.

Flat farm land, haystacks, and sleek cattle reminded us of Holland. There were many windmills. Everything was neat and clean (page 646).

Rønne, the principal town, seemed new. Our taxi driver told us the grim reason. After the Nazi collapse the commander of the German occupation forces refused to surrender to any but British or American troops. The Russians wanted to take over, so mercilessly they bombed the town until the Nazi general capitulated. Immediately the Russians moved in. They remained until the spring of 1946, leaving reluctantly.\*

Borgholm could be the "cork" in the Baltic, just as Porkkala is in the Gulf of Finland (page 625). Its strategic position is important.

#### Mines Still Lay in Wait for Unwary

Beyond Borgholm we encountered another reminder of war. The official British Admiralty-U. S. Hydrographic Office publication *Synoptic* contained doleful comments: "Mariners are warned to keep a sharp lookout for drifting mines . . . the temptation to cut corners must be resisted . . ."

Although we felt wooden sailboats were safe, we stayed within buoyed swept channels, especially since a steamer had been lost not long before taking a short cut.

Tra belongs on the Swedish mainland was a

dead city. Before the war it was an entry port for Polish coal, a terminus for ferries commuting to ports on the south Baltic. The Russians stopped such traffic. Coal chutes stood gaunt and rusty along deserted quays, ferry slips lay empty.

#### American Bombers Flew in Baltic Door

During the war vast fleets of American planes roared over Tralleborg on their way to German targets. By coming in over the Baltic they avoided much German fire.

"Bombers would go by for an hour," said a Swede. "One time the commander of our anti-aircraft batteries here in Tralleborg talked by radio to the commander of the American squadron. 'You are over Swedish territory,' said the Swedish officer. 'We know it,' replied the American. 'I must fire,' said the Swede. Our guns fired furiously. 'You are shooting too low,' cautioned the American commander. 'We know it,' answered the Swede."

Before the war all shipping came in or out of the Baltic had to round Falsterbo peninsula, the southwest tip of Sweden. Outlying shoals forced steamers close to the German-held Danish shore.

To prevent being bottled in the Baltic, the Swedes frantically cut a canal through the peninsula. It is not imposing as canals go, merely a wide ditch a mile long, but during the war it was of tremendous importance.

Today large ships again round Falsterbo, but we chose the new canal. As *Caribbea* and *Aegle* passed through, I was struck with the parallel that forced the building of two Swedish waterways a century apart: the threat of Napoleon resulted in the Gota Canal (page 608), that of Hitler in the Falsterbo.

On leaving the canal we found ourselves in narrow waters. There are three exits from the Baltic to the Atlantic, two lying between the Danish islands, and the third, the Sound (Öre Sund), between the principal Danish island and the peninsula of Sweden. From Copenhagen (København) the Swedish coast is plainly visible.

Markers showed safe lanes to follow. Ference buoys did not indicate hazards created by Nature, but by man. The aviators of every belligerent nation used the Sound as a dumping ground.

Again we sailed in the wake of history as the towers and buildings of Copenhagen lifted ahead (page 622). In these very waters occurred one of the most dramatic incidents in the career of that great British naval hero, Horatio Nelson.

A British fleet commanded by Admiral Sir Hyde Parker descended upon Copenhagen in

1801 and demanded that the Danes cease conveying merchant ships, thus aiding Napoleon. The Danes refused. Their fleet, not fully in commission after the winter, lay unheeded under the protection of powerful forts. A frontal assault appeared futile.

But Nelson was undaunted. He secured his senior's permission to approach the Danes from the rear with half the British fleet. By night small boats sounded an unguarded channel the Danes thought safe. When morning came, the British ships sailed in. Some ships grounded, but Nelson did not hesitate.

The Danes fought furiously. Admiral Parker, thinking the contest hopeless, signaled to withdraw. When Nelson was told of the order, he raised a telescope to his blind eye. "I see no signal," he cried. "Continue fighting!" Most of the Danish ships were captured or sunk, downing Napoleon's Baltic ally.

#### Copenhagen—a Danish Paris

Copenhagen might be called a Paris of the northern countries.\* Streets are wide and shaded by trees. Life is leisurely, based on sidewalk cafes and fine restaurants. Nowhere did we enjoy better food, yet, curiously, it was the only country where we were issued ration tickets. Denmark was not short of food, but the Danes had voluntarily tightened their belts to export meat and dairy products to other nations.

Everywhere in Copenhagen we saw the mark of one of her most energetic rulers, King Christian IV, that same gentleman who refounded Oslo. Although he died in 1646, much remains of his city: a Stock Exchange, many churches, barracks now used as apartments, and even a round tower designed for astronomical observations. Peter the Great of Russia on a wager drove a team of horses up its spiral stairway.

As we cleared the narrow passage from the Sound, bound for Göteborg, a huge fortress towered over our decks. It was Kronborg at Helsingør, better known as "Hamlet's Castle." From its walls we had previously looked across the two-mile gap to Sweden. Now we were staring up at its stern battlements, but not as woefully as earlier sailors when its guns forced them to stop and pay toll.

Shakespeare chose an appropriate setting for his tragedy. The castle still broods, a somber mass full of threat.

## Bergen's Fishing Fleet Sleeps but Won't Quit the Herron, Cap'n C. says Inf

There are berries, apples, and other fruit in the market here, but the fishermen are not yet ready to leave the harbor. They will stay here until the end of the season, says the captain of the largest ship. They will not go to the coast until the end of the season, says the captain of the largest ship. They will not go to the coast until the end of the season, says the captain of the largest ship.

The night was very dark and the water was very rough. We had to stop at the first light house and wait for the fog to clear. We were in danger of losing the ship if we had not waited.

The first morning we began to see of the back of the ship. The water was very rough and the fog was very thick. We had to stop at the first light house and wait for the fog to clear. We were in danger of losing the ship if we had not waited.

We had a very good day. The water was very calm and the fog was very light. We had to stop at the first light house and wait for the fog to clear. We were in danger of losing the ship if we had not waited.

The first crew had a very good day. The water was very calm and the fog was very light. We had to stop at the first light house and wait for the fog to clear. We were in danger of losing the ship if we had not waited.

nothing. We had to stop at the first light house and wait for the fog to clear. We were in danger of losing the ship if we had not waited.

After the first morning we began to see of the back of the ship. The water was very rough and the fog was very thick. We had to stop at the first light house and wait for the fog to clear. We were in danger of losing the ship if we had not waited.

As I was the first to see the back of the ship, I was very happy. The water was very calm and the fog was very light. We had to stop at the first light house and wait for the fog to clear. We were in danger of losing the ship if we had not waited.

There are many things that have happened since the first morning. The water was very calm and the fog was very light. We had to stop at the first light house and wait for the fog to clear. We were in danger of losing the ship if we had not waited.

Men, even those now silent, will speak again.

# Here Come the Marines

BY FREDERICK SIMPICH

**A**T TEN TAVERN, Philadelphia, on November 10, 1775, our idolized Marine Corps was born. Seagoing soldiers, able to fight on land or water—that's what the Continental Congress wanted. So recruiting officers, beating drums Salvation Army street style, "knocked up" the first of what are now America's fighting Marines.

That valiant little Ten Tavern band, with its Rintocks and funny clothes, was expanded to about 435,000 men in World War II, and suffered 83,000 casualties.

In its colorful career of 175 years, our Marine Corps has shot its way ashore in some 250 places and seen more odd peaks and crannies of the world than any other Yankee fighting force.

In that time it has ridden everything from canals and sluggish Mongolian ponies to rubber boots, dog sleds, and submarines. For sheer audacity, reckless courage, and hair-breadth escapes, its exploits read as might some imaginative Plutarch's *Life* of all the sea rovers, buccanniers, and hand-to-hand fighters since the wild days of Genghis Khan.

Soon after Communist North Koreans invaded across the 38th parallel, ground and air units of the Fleet Marine Force, based at Camp Pendleton and El Toro, California, sailed from San Diego to join Gen. Douglas MacArthur's forces. Within a few days after landing, the Leathernecks were in action against a numerically superior enemy.

## Message Worth Framing

Jealous of its hard-earned "first to fight" reputation, the Corps was ready and rarin' to go when the word flashed from Tokyo that MacArthur wanted all the Leathernecks that could be sent him.

"Hey, Mac, we're back!" sang out one Marine as the vanguard elements of the famed First Division hit the shore in Korea.

"Compliments of the Corps!" So read legends on the bombs loaded under the wings of Marine ground support planes.

The Marines are pretty proud that MacArthur called for them in Korea—so proud, in fact, that this official document probably is due for framing and preservation. The Corps knows a historic exhibit when it sees one, and will undoubtedly take good care of the MacArthur message.

Loving a frolic as well as a fight, the singing, skylarking Marine encoats himself to American hearts.

Proof of Marine popularity is the eager war-

grandstand crowds whistle, clap, and shout "Here come the Marines," when, on any Fourth of July or other parade day, the Leathernecks march by.

In all their exciting annals, from China to the Caribbean, the Marines are to us what the Foreign Legion is to the French, or what the Grenadier Guards and the Gordon Highlanders are to the British.

Patric the Americans sense this, even in the crashing chorus and triumphant words of the *Marines' Hymn*.

From the Halls of Montezuma  
To the shores of Tripoli,  
We fight our country's battles  
In the air, on land and sea;  
First to fight for right and freedom  
And to keep our honor clean,  
We are proud to claim the title of  
United States Marine.

All around the world on troop transports bound for adventures overseas, under tropic palms, in the desert, or under a hail of bullets behind the fighting lines, the words of their song have inspired legions of Marines to a high resolve and renewed faith in their oath of loyalty to the flag.

"From the Halls of Montezuma to the shores of Tripoli" is not just a poetic line. Marines went with Gen. Winfield Scott on that almost interminable march to Mexico City in 1847, from which there was no turning back.

When Scott drew his sword and threw away the scabbard, it was conquer or die. He pushed on with Marines and soldiers to the dramatic Battle of Chapultepec; despite heroic Mexican defense, he scaled the walls of Chapultepec and took the National Palace—the 'Halls of Montezuma.'

Barbary State pirates, on the north coast of Africa, used to abuse our merchantmen. After an arrogant pasha cut down the flag from over our consulate in 1801 and declared war on the United States, our Navy and Marines struck the 'shores of Tripoli.'

Here the Leathernecks, under Lt. Stephen Decatur, performed feats of daring still fresh in warlike memories.

In one astounding move, Marines marched from Alexandria, Egypt, with a group of native troops and mercenaries across the Libyan Desert, along the shores of the Mediterranean, to attack and take the walled city of Derna in Tripoli. Over it, for the first time in that part of the world, they raised the Stars and Stripes. This was in 1805.

A Derna friendly pasha gave Lt. Presley Neville O'Ranzen, USMC, a peculiar type of

### Two Jinks Herk & Theresers Symbolize Minor Value at Its Finest

In 1904, in Washington, D. C., a group of friends, including W. L. Jinks and a husband, Theresers, were at the time of the first of the Washington, D. C., Exposition, and they were looking at the exhibits.

One of the exhibits was the statue of the "Washington, D. C., Exposition, 1904," and the friends were looking at it.

W. L. Jinks, who was the first of the group, was looking at the statue of the "Washington, D. C., Exposition, 1904," and the friends were looking at it.

## Seasoned in World War II's Jungle Battles, Marines Head for a New Campaign in Korea

Men of the United States Marine Corps are completing their training in the New Guinea Campaign Area and are being sent to Korea. With them will go the United States Marine Corps, the United States Army, the United States Navy, the United States Air Force, and the United States Coast Guard.

Awed by the sound while with the Marine Corps in Korea. A number of this Marine Corps are called "Leathernecks" by officers of the Leathernecks.

### How Leathernecks Got Their Nickname

That nickname "Leathernecks" came from a black leather strap put on the Marine's neck. When the strap was tight, it was getting the throat hit by the whistling sweep of a snail's shell.

Though Leatherneck is thus explained, no one seems to know the origin of another nickname, "gopher." Webster defines it as Army slang—*G.I. plus Marine*—and says that it is used "derogatorily." Marines, however, do not mind being called gophers.

Just prior to the outbreak of the Korean War, the Corps numbered about 7,000 officers and 65,000 men. Our National Security Act of 1947 says the Marines shall combine with the combined arms with the Army, the Navy, the Air Force, and the Coast Guard.

defense of overseas naval bases and for the conduct of special land operations as may be required in the prosecution of a naval campaign.

The law further says Marines shall work with the Army and Air Force to develop tactics, techniques, and equipment used by land and air forces; that they shall provide detailed reports upon the readiness of the Navy of the ground, naval forces and naval operations; and that their duty is the first of the Marine Corps.

These last words mean that Marines may still be ordered to land overseas to protect American lives and property, as in the past, to guard our rights and interests in other countries, or protect the Philippines and the Marshall Islands of rights or property.

When a "lost camp," where a man is trapped, it is pounded into a Marine's head that he must think and act quickly to find his way out.

### Grimacing "Skinheads" Get the Word on How to Make Up a Bank

"You fold it like this and tuck it under here," the sergeant tells a platoon of Marine recruits at Parris Island. "Shut and bounce it and it'll come out like a hot iron." The instructor drops a penny on the bed. "If it doesn't bounce—up everything again and try a

After long observation of the "skinheads" in our armed services from the China coast to the Philippines, the Marine officer is unable to resist the urge. "They are a right Huns-Muckers-like outfit. For one and one for all. And so many enlisted men have no one to lead them."

Like Hammett, however, a St. Louis boy who served four years in the navy and would be promoted to sergeant. A sergeant in Hammett's (serving as a captain in the Marines) organized native government. This was an exploit now topped in the annals of Marine folklore.

There was no revelation. Marines were there to help the local government. The local government was the ruler was the ruler and would be the ruler. Once he was the ruler of all the Marines felt, peace would be brought.

So said by Col. William R. Burton, a former Marine. Hammett, around a clever trick. "Look at that face and don't suggest old diving gear," said the colonel, the colonel. The colonel, the colonel, the colonel. These two Marines actually passed all the tests and were given the highest honors and sent them home. Not only that, they dragged

him out of the mud. The colonel had not only planned it. Marine was a matter.

Hammett and Burton got the Congressional Medal of Honor for "extraordinary heroism and conspicuous gallantry and intrepidity in action under the enemy."

It was only the start of Hammett's amazing career. He went on later becoming a major, then a colonel, then a general. He was a hero in the Philippines, then in the Pacific, then in the Atlantic.

Awarded the Navy Cross, the Gold Star, the Legion of Merit, and a number of other medals, he was a hero in the Philippines, then in the Pacific, then in the Atlantic. He was a hero in the Philippines, then in the Pacific, then in the Atlantic.

### Officers May Go on Delicate Missions

I know one Marine officer with the greatest heart and the greatest mind. He is a hero in the Philippines, then in the Pacific, then in the Atlantic. He is a hero in the Philippines, then in the Pacific, then in the Atlantic.

He is a hero in the Philippines, then in the Pacific, then in the Atlantic. He is a hero in the Philippines, then in the Pacific, then in the Atlantic. He is a hero in the Philippines, then in the Pacific, then in the Atlantic.

### Marine Rifleman Surprise the Defense with a Helicopter Landing

Some of the most dramatic action with the First Marine Division on the Korean front. Among the many feats of arms and valor of our Marines, in a demonstration at Quantico, Virginia, a helicopter lands on a field and a twin rotor ship can then be seen behind enemy lines (page 623)

behind the scenes, he's busy with cloak and dagger.

Marine officers often serve as naval attaches, some aid the State Department on missions to such remote capitals as Addis Ababa, or in trying to negotiate a peace between warring factions in turbulent lands.

When in 1846 war with Mexico was imminent, and we believed that Great Britain and France coveted California, President James K. Polk wanted to send an expedition to the American coast at Monterey. Our Navy on the west coast, and to Capt. John C. Frémont, who was out there on an exploring trip.

Polk chose Marine Lt. Archibald H. Gillespie as his agent. Gillespie made his way across Mexico in disguise, talked to the commander of our Pacific Squadron, Commodore John D. Sloat, then sailed to Monterey. There he gave Consul Thomas O. Larkin the White House message.

But Frémont was away, up near the Oregon line. After a trek of 600 miles through savage Indian lands, Gillespie met up with him.

It's history now that our western boundary was extended to the Pacific; and Gillespie, by courage and tenacity, played his part in gaining California for Uncle Sam.

California and the Marines have always been good friends. When the *Cyane* sailed

to take San Diego, Lt. Stephen Clegg Rowan, its executive officer, went ashore on July 30, 1846, with a Marine guard commanded by Lt. William P. C. Markley. It was this Marine officer, local historians say, who doubtless raised the Stars and Stripes over that part of San Diego known as Old Town. It was the first time our flag flew hereabouts.

Markley served with distinction in the California campaign.

Today, Marines and former members of the Corps are active in San Diego life.\* The dramatic editor of the morning newspaper is a former Marine. So is the owner of the largest sporting goods store, the window trimmer at a big department store, the under-sheriff of the county, an assistant cashier at a large bank, and a former mayor of Coronado.

When they call San Diego a "Navy town," that, of course, takes in the Marines.

### Hush-hush Training

Hush-hush training—in radar and espionage work—goes on secretly behind barbed wire at Camp Del Mar, in southern California.

There I visited Capt. Kenneth J. Houghton, USMC, who a year ago took a group of men

His name appears in the records of the  
superior Southern Wars of 1875-42 in  
Liberty and our war with Mexico. He  
fought in the campaign with the Army  
and at home with the Navy in 1894  
and 1895. He was in the Navy in 1894.

### Example 6: A Speech Act Rule

Because the Vero and Newburg  
cottons have the same staple, the Vero cotton has a  
slightly greater spinning range than the  
Newburg cotton.

The first of these, World War II, was one of the greatest threats to the survival of the Jewish people. Millions of Jews were killed or persecuted, and the Jewish people were almost completely exterminated. The Holocaust, as it is known, was a tragedy of unprecedented proportions. The millions of Jews who were killed or persecuted were not only the Jewish people, but also the Jewish people's culture, language, and traditions. The Holocaust was a tragedy that has shaped the Jewish people's identity and their relationship with the world. It is a tragedy that has led to the Jewish people's renewed commitment to their faith and their people. It is a tragedy that has led to the Jewish people's renewed commitment to their faith and their people. It is a tragedy that has led to the Jewish people's renewed commitment to their faith and their people.

The Corps will have a low degree of mobility since it will be unable to follow the Marines to the beachhead. To overcome this, the fighting power of the Corps will be reduced. It may come that the Army, like the Navy, will be split into power and maneuver. The power will be used to hold on to the reputation of the particular unit, a ruler or a regime, and the maneuver

[illegible]

It seems almost too coincidental that, during their 1995-1997 tenure as heads of the

## "The World's Deadliest Weapon" Is a Marine and His Rifle

So said the late General of the Armies John J. Pershing. The AEF combat record was marked by Marine exploits in such World War I campaigns as Wood's Sonsons, Chateau Thierry, St. Michael, and Meuse-Argonne. For 175 years Leatherstockings have seen action in more of the world's odd corners than any other American fighting force. These men train at Quantico, Virginia.

*Staff Sergeant Richard B. Bingham*, Marines, laid down the British crew of the *Scorpa* and boarded that prize in the first land attack on the island of Iwo Jima.

In the land fighting originated a distinctive feature of Marine uniform—the garrison braided knot on officers' caps. Tradition says Marines first sewed bits of line on their heads so that comrades firing from the rear could distinguish friend from foe.

### Ward End, but Training Doesn't

For 175 years Marines have never ceased to train. That training carried them from Guadalcanal and Tarawa to Iwo Jima and Okinawa in the last war—and now to Korea.

Now they're training for the future, but

with new weapons and new tactics. I know I've lost blow to their principal bases—Quantico in Virginia, Cherry Point and Camp Lejeune in North Carolina, Parris Island in South Carolina, and San Diego, Camp Pendleton and El Toro, in southern California.

I spent a week with Maj. Gen. A. Houston Noble, at that time commander of Parris Island boot camp. He and his captain's wife, fondly known to the whole camp as "Miss Adlai," are heart-warming examples of that respect and affection which the best type of enlisted Marines feel for their officers and families. You see here with what regard and protective orders training officers treat their men.

Marine Corps history is full of heroic cases in which officers lost their lives trying to save their men.

Marines are made, not born. You see how the recruits train on Parris Island (pages 650, 651, 653, 670) and at the other boot camp in San Diego. Traditionally, in peacetime or in wartime,

they're all hand-picked volunteers. In the standard ten weeks of tough, trying, back-breaking training they suffer, die, and are recruited. Only the fit survive.

"Sure, we first shingle their heads close as a mule's tail," said General Noble. "That's a mighty social leveler; that and the rough dungarees make 'em all look and feel alike. Then you can't tell a millionaire son-of-a-bitch from a Brooklyn paper-hanger's son."

And here the drill instructor, a first lieutenant sergeant with a voice like a mud and drives them mercilessly down the hard path to physical and technical perfection.

\* For additional information on the Marine Corps, see *Marine Corps: A History of the United States Marine Corps* (Cumulative Index, 1949-1950).

"Give us two weeks on a fat lay—no work at all—and we'll be dressed to fit his pants, . . . some more. We fatten them up."

Then our drill instructor says drill, drill, drill. "If any foot, . . . of any size. Then wash clothes, scrub shoes and hands, polish rifle—and always on the double. Run, run, run—even to the next post back."

By night there is tired all they water is short.

There is work on the day but it is a piece of work. Ever then they work to and from in the night. No more to work. Games are not lost at anything, to win them for any other use is longer to re-establishing signals.

They have and play the with knives, tree party and thrust with knives, and learn how to break a man's jaw or skull with a knife. That what necessary to survive. At night they learn to hit an enemy in the back of the neck with the edge of a hand and knock him cold.

"We around it into turn, over and over," said General Noble. "All they come to believe, themselves, that a Marine is the toughest, most fearless, and invincible fighting man on earth."

At the rifle range I watched recruits practice firing.

"Don't pull that trigger—squeeze it like you would the seat of your pants or back in the bushes," bawled the JG.

"And you there—bring pants. Keep your pants down! Don't stick it up over your head, or some sucker will shoot it off . . . Keep flat, dig your heels into the sand! Move snake tracks with your toes!"

Women Marines have to look on as the men giggle. Then to learn in that week—standing ten weeks in "chicken" as they call the recruits—arms even spread as peak.

### "Join the Sack, Men—Fast Living!"

In the last days of the war, the Marine Corps was the most popular branch of the service. Every man wanted to join. They were the "sack men," the high-ranking officers and staff were as good as gone.

Men talked the sack men round with sticks to where each marksman's name on the target; then they'd pull down the target post, white paper over the red lines, and rise up to the next number.

When the sack men had talked the whole lot, they would a red flag—the sack men's flag. A red flag of the whole lot under Marine's colors. A red flag of the whole lot under Marine's colors.

All through their Marine careers, even in the most and after that put in hours of hard work at regular intervals, to keep on top.

### From Bone Camp to Stations

When they moved to the stations, the men were not so popular as they were in the past. They were not so popular as they were in the past.

USS Intrepid's Deck, Marines Stand at Parade Rest on Intrepid's Flight Deck

USS Intrepid's Deck, Marines Stand at Parade Rest on Intrepid's Flight Deck

Marines pray as well as fight. At Ft Tonn, for example, they have in their chapel a three-sided altar—a side for Jews, one for Protestants, and one for Catholics. They're liberal, and tolerant always of the other fellows' faith. If a wounded buddy is dying, they bare their heads or kneel while a chaplain says a simple prayer. Or in New York, or New Orleans, they may all flock to the big cathedral, say on Christmas Eve, to attend a pontifical solemn High Mass.

### Quantico Is a Tough School

Rozzing helicopters, like giant "snake doctor" insects, hover over the fields and forests of Quantico, 55 miles down the Potomac from Washington, D. C. This is the big Marine school, with especially tough, skull-busting advanced courses for majors and colonels.

Think of the clumsy saillouts used by early explorers hereabouts, with maybe one small muzzle-loading cannon good only for scaring Indians. Compare them with a modern Marine "Water Buffalo," or seagoing tank, with machine guns and a rapid-fire cannon that shoots several miles (page 658).

We flew in one twin rotor "Sausage." From it we watched a sister helicopter from which dangled a cable with a big hook on the free end of it. Hovering low over a field howitzer, the copter picked up the cannon with that hook, lifted it up into the sky, carried it a mile, and set it down ready for firing, all in two minutes.

"We train gun crews to do that at maximum speed. That's so that any time, especially in a fog or on a dark night," explained an officer, "we could move guns quickly by air, drop them down behind enemy lines or in some other unexpected place, and suddenly commence shooting."

This whole Potomac bank at Quantico fairly crawls with amphibian vehicles, engaged in orcharded training problems (page 652). We rode out into the river, with a squad of Marines in spotted camouflage suits, in an amtrack LVT (Landing Vehicle, Tracked)\*.

Over a nearby Water Buffalo hovered a helicopter. It lowered a harnesslike affair on a cable and "rescued" a wounded man from the Buffalo (page 653).

This school, commanded by Maj. Gen. Franklin A. Hart, emphasizes amphibious war. Besides classroom work with movies, maps, textbooks, and lectures, it sends students into the field and out on the river or up in the air, to work out problems using men, weapons, and vehicles.

Often one outfit of officers and men will pretend to be the "enemy," who are trying to

seize, or trying to defend a beachhead. This enemy is opposed, of course, by Marines, simulating another "army."

Each year the Quantico course ends with an Amphibious Command Post Exercise, which includes the theoretical landing of an enemy force of corps size at Onslow Beach, North Carolina. Then students from this school act as landing force commanders and staffs, and Marines from the Second Division, Camp Lejeune, seek to "repel" the attack. In this training, officers and men of the Navy and some of their ships and transports take part, sometimes other Marine amphibious exercises are held with West Point cadets and Annapolis midshipmen participating.

Training in communications is heavily stressed.

Take this situation: a landing party is shooting its way ashore, but strikes a pillbox, a fort, or other enemy obstacle that's slowing it down. It wants gunfire from the ships lying out at sea behind it, or it wants its Marine airplanes to come over and bomb those enemy positions that are impeding its advance.

How to get that word back to the ships or up to the planes, most quickly, and tell them just where to drop their shells and bombs?

To perfect radio and other communications training, Marine airmen take duty with the ground troops; sometimes a Marine infantry or artillery liaison officer may ride with the bomber planes to speed up effective co-operation.

Finally, advanced classes at Quantico tackle theoretical problems involving new enemies, new weapons, and new ways of fighting a war. They apply these to this or that part of the world map. Who will attack us, where, and how? Where would we go to fight back? Students get free rein; many novel approaches and fresh ideas come to light.

### The Fleet Marine Force

The term "Fleet Marine Force" is well understood in the Navy, but it's new in law, so Marine officers are glad Congress used it in the 1947 act. Such a force, in brief, is a balanced force of Marine land, air, and service elements integrated with our Atlantic or Pacific Fleets. It is trained and equipped to seize or defend advanced naval bases, and to fight as far inland as the Navy wishes.

For years, before Pearl Harbor, Marines rehearsed on just how to make such landings.

Early as 1921, in war plans for use in the Pacific, Navy and Marine strategists began

\* See "Landing Craft for Invasion," by Maxwell Red Greenwood, NATIONAL GEOGRAPHIC MAGAZINE, July, 1944.

## The "Old Man" Gives His Opinion of Marine Performance in "Operation Portrex"

Something about the way Marines fought at Vella Lavella, the way they were in Saipan, and the way they were in Iwo Jima, has impressed the Japanese at Yonkers Island, Puerto Rico. In fact, the Japanese were the first to use World War II Marines as a model for their own army. The word "Marine" is now used in Japan to mean "soldier" and "warrior" from the days of Samurai.

fighting and how such an island-capturing war would have to be fought. And, because the Japanese stop by stop, that is exactly how it was that the young Marines, in preparation for such a future war, to seize advanced positions. The Marine landing force was moved out by Marine and naval planes from the carriers to the island of Vella Lavella, and the General and his staff were there, over the heads of the Marine landing parties.

### An Intelligence Officer Announces

At a recent meeting of the Joint Chiefs of Staff, the study of "Advanced Base Operations in Micronesia" prepared by Lt. Col. Earl Hancock, U.S. Marine, about 1945, was being turned over to the work of the committee with the Japanese in the Pacific. The Japanese, who had been supported at Kure Island in the Pacific group, through the Japanese Navy.

They were our tomorrow and of course

"the next step" was "the day after tomorrow" the Japanese. "We've stopped fighting the Japanese in the Pacific" and "the next step" was "the day after tomorrow" the Japanese. "We've stopped fighting the Japanese in the Pacific" and "the next step" was "the day after tomorrow" the Japanese.

And then a lot of "the day after tomorrow" the Japanese. "We've stopped fighting the Japanese in the Pacific" and "the next step" was "the day after tomorrow" the Japanese.

Some of the "the day after tomorrow" the Japanese. "We've stopped fighting the Japanese in the Pacific" and "the next step" was "the day after tomorrow" the Japanese. "We've stopped fighting the Japanese in the Pacific" and "the next step" was "the day after tomorrow" the Japanese.

In order to meet the single battle of 1945, the Japanese. "We've stopped fighting the Japanese in the Pacific" and "the next step" was "the day after tomorrow" the Japanese.

The Japanese. "We've stopped fighting the Japanese in the Pacific" and "the next step" was "the day after tomorrow" the Japanese.

An Ingenious New Gadget Lays a Steel Carpet in Space Minutes Across a Beach.

At the end of the 19th century, a considerable number of the population of the Balkan region, especially in Western Bulgaria, had been converted to Islam and were thus excluded from the state's political life. Muslim converts were considered slaves. With the World War I, the Ottoman Empire had lost its Balkan provinces and Bulgaria.

There is a further subtle mistake in the above reasoning.

Several of the models in this review are designed to place the user's control and input in direct contact with the system. The user's interaction with the system is not mediated by a computer screen or keyboard. The models are designed to be used in a variety of ways.

These men were not. It made you think of something that, in the state of affairs that obtained here, such as Douglas or Sumner would not do. I tested a state house to see if I could find out if his men, who said they were not, and I was. He said he had no more to do with it but I had to go. I had to go to the power source.

1. If you are a member of the Senior group then you will not be charged with any fee.

And so you see, with a perfect understanding of the situation and a perfect understanding of the situation, I think that when the report has been made and we have done the best we can for the people, the people will be satisfied. I think the people will be satisfied. I think the people will be satisfied.

But there occurred within a few  
 years in the same way, the first of the  
 great fire of 1851, which was a great  
 disaster to the city. When he saw the first  
 flames, he ran out with a bucket, and  
 tried to extinguish it, but the  
 fire was too strong for him.

1980年，在《中国植物志》第44卷中，首次正式发表了这一新种。该种的模式标本采自海南岛尖峰岭，现藏于中国科学院植物研究所。除模式标本外，尚有正标本和副标本若干。该种的特征是：茎直立，高达1.5米，无毛；叶纸质，长椭圆形，长4-6厘米，宽1.5-2.5厘米，先端钝，基部楔形，上面深绿色，下面浅绿色，中脉明显；花序顶生，总苞片长圆形，长1.5厘米，宽0.5厘米，先端钝，基部楔形，上面深绿色，下面浅绿色，中脉明显；花冠白色，裂片5，长圆形，先端钝，基部楔形，上面深绿色，下面浅绿色，中脉明显；果实长圆形，长1.5厘米，宽0.5厘米，先端钝，基部楔形，上面深绿色，下面浅绿色，中脉明显。

Of course, in the Midwest, 145 years of continuous American participation in 2 major wars is but a momentary pause in growth. There is more to life here now as a country than in North Carolina, and that's true. We have more than 100,000 industrial plants and open-works here.

### Lady Leathernecks Return to Duty: Their Motto: "Free a Man to Fight"

Having left the service in 1918, the 6888 Central Postal Directory Company, the only all-black unit in the U.S. Army, has returned to duty. The unit, which was created during World War II, was the first all-black unit to be activated. The unit's motto is "Free a Man to Fight." The unit is currently based at Fort Bragg, North Carolina.

There's even one (unconfirmed) story that while hunting wild geese around the Taku marshes Lt. Gen. James T. ("Nuts") Moore (retired) ran out of shells. With traditional Marine ingenuity and quick thinking, he flew low over the swamps in his open plane; this started up the geese. Then he flew back, under them, reached up and grabbed a fat gander by the feet!

When I asked General Jerome if I might quote him on this story, he said, "Well, strange things can happen when Marines get ashore in China!"

But never mind China. Look at Camp Joseph H. Pendleton, that 126,000-acre base at historic Santa Margarita Ranch, on the coast of southern California. It's headquarters for the First Marine Division.

In peacetime it leases some of the land—5,627 acres this year, for rentals totaling \$244,562. Tenants grow grain, peppers, tomatoes, and vast fields of flaming red poinsettias. On its hills it runs some 27,000 sheep, goats, horses, and cattle.

Pendleton is a self-contained municipal unit, with movies, playgrounds, stores, chapels, laundries, clubs, libraries—every facility a city of 25,000 needs—besides myriad barracks, offices, machine shops, and acres of canvas-covered weapons.

Colossal field maneuvers, with bulldozers and tanks in motion, plow terrifying scars over its grassy and brush-grown hills; heavy cannon fire echoes like thunder from distant mountains. And, every now and then, the whole division takes to planes, ships, and amphibian craft and roars away to San Nicolas or San Clemente Island, off the California coast, for that everlasting amphibious training which keeps Marines on their toes.

#### Rancho Now a General Headquarters

One night I sat with the commanding general, Maj. Gen. Graves B. Erskine (recently sent to the Far East), and his talented wife, in their historic ranch-house headquarters. This Spanish rancho—now a Marine camp—was once owned by Andrés Pico and his brother Pio Pico, last Mexican Governor of California. Their vaqueros and others, armed with lances, fought the American soldiers and Marines under Gen. Stephen W. Kearny at San Pasqual in our war with Mexico.

I've been in many a Marine headquarters, from Haiti to the Philippines, but I never saw a setup like Camp Pendleton.

An enthusiastic naturalist and hunter, General Erskine had built fish ponds, cover for quail, and "grizzlers" where birds can drink water and hide safely from such predators

as hawks, foxes, and bobcats. In his jeep he sent me on a bone-breaking, above-the-clouds mountain ride with his aide, Lt. William F. Doehler, who carried a carbine in case deer tried to kick us, coyotes tried to chew off our tires, or bobcats should jump into the jeep.

Wild animal signs and tracks were everywhere. Once we saw crows and coyotes devouring a sheep. Doehler is a born Nimrod. So is the General. Why ask, then, why Doehler was the General's aide?

#### Reserves, Too, Are Trained and Ready

Maj. Gen. M. H. Silverthorn, former director of the Marine Corps Reserve (he became Assistant Commandant of the Corps last July), told me how ready to fight his men are too. In 1950 the Reserve launched the greatest training program in its postwar history.

Until interrupted by the Korean War, a high light of this 1950 program was the airlift. Last year transport squadrons of the regular Marine air arms lifted more than 8,000 ground reservists to and from training locations without a single accident. That operation was expanded to transport about 12,000 by air.

When World War II broke, there ceased to be any difference between reservists and regulars. Both fought heroically. By V-J Day, reserves made up more than 40 percent of all Leathernecks in action, including more than 18,000 women reserves.

Before Korea, 125 separately administered units of the Organized Reserve were training in 119 cities of the United States and Hawaii. Of these, 100 units made up the ground component, manned by more than 34,000 officers and men. They trained at least one night a week and two weeks each summer. About 32 more such units were to be set up this year.

Today, all the Organized Reserve battalions are on active duty.

Our Marine Air Reserve now consists of 30 fighter and 11 ground-control intercept squadrons based at 25 naval air stations throughout the country. I lately watched a squadron of Corsairs training at Anacostia Naval Air Station, in the District of Columbia. These fly boys—civilians, use their vacations to practice with their planes.

"Our yearly training is held at nine regular Marine bases on both coasts," said General Silverthorn. "All these men are ready to fight at the drop of the hat."

In the late war some 18,000 women joined the Marines, mostly as clerks. Many worked as weather observers, control tower operators, parachute riggers, tank trainer instructors,

### Marines Cover a Korean Road with Bazooka and Machine Gun

These two women were sent to the front to act as mortar or transport to prevent a target. One man also was killed in action. The other two were killed while a company of soldiers held the road.

and radio operators. Some served as cooks and mechanics. Literally, these latter worked from "soup to nuts." None fought.

Tireless, capable, efficient, these women released enough men to form a whole new division of fighting Marines. Their motto:

"Free a man to fight" (page 667).

Director of Women Marines is Col. Katherine A. Towle; she holds degrees from the University of California, where she was formerly assistant dean of women. Like her subordinate officers, she is a regular Marine, enjoying all the privileges, allowances, pensions, etc., that male officers enjoy.

But marriage is a problem," said one. "We can marry, sure; we can even carry a husband as a 'dependent,' if he can't support himself. But neither we officers, nor the enlisted women may have children born while we're in service. The only children we're allowed to have, and hold our commissions, are children over 18. And you can't give birth to an 18-year-old baby!" she said laughingly.

You think of Brady's famous Civil War pictures when you run through the Marine Corps' astounding Pacific war photographs, made by its own combat cameramen fighting the Japs. It's a veritable pictorial history—

### Dogs Used to Carry Messages

Dogs added much to the pictorial history of Pacific war. They were used to patrol, to detect an enemy's presence, served as "alert" dogs with patrol and outpost units. German shepherds were used to carry mes-

sages. Dropping their cameras, Marine photographers. "Women in Uniform," by La Verne Bradley, National Geographic Magazine, October, 1943.

## Murders Draw a Deadly Head with a Branch Blazier, America's New York Killer

For many months, it has been the story of a man who has been called a "killer" by the press. He is a man who has been called a "killer" by the press. He is a man who has been called a "killer" by the press. He is a man who has been called a "killer" by the press.

As one of the most powerful and feared men in the world, he has been called a "killer" by the press. He is a man who has been called a "killer" by the press. He is a man who has been called a "killer" by the press. He is a man who has been called a "killer" by the press.

### Navy Keeps Transports Ready

Astonishment gripped the whole world when the British A-101 was performed by the British and American forces.

As a public and a private force, it has been successful in the hands of the British and American forces. It has been successful in the hands of the British and American forces. It has been successful in the hands of the British and American forces.

From the past, the United States has been a great power. It has been a great power. It has been a great power. It has been a great power. It has been a great power.

ready to start on short notice for the docks at San Diego.

The Navy has been ready to start on short notice for the docks at San Diego.

There are only a few days left as the Navy has been ready to start on short notice for the docks at San Diego.

Well, with the Navy's help, the Navy has been ready to start on short notice for the docks at San Diego.

In two days, I could have a lot of work done. I could have a lot of work done. I could have a lot of work done.

This is how the plans are being put out.

The Navy has been ready to start on short notice for the docks at San Diego. The Navy has been ready to start on short notice for the docks at San Diego. The Navy has been ready to start on short notice for the docks at San Diego.

The Navy has been ready to start on short notice for the docks at San Diego. The Navy has been ready to start on short notice for the docks at San Diego.

The Navy has been ready to start on short notice for the docks at San Diego. The Navy has been ready to start on short notice for the docks at San Diego.

## Where Tough Training Pays Off: Marines Dash Across Turnua's Deadly Beach

Scenes to report these World War II battles took place in the south Pacific, where the United States fought against the Japanese. The Marines who fought in these battles were the first to land on the beach.

ship in reverse order. This is known as "beach landing."

This means each commanding officer will have his unit "beach" in the sequence which will most easily let him carry out his orders. Some are based on the same troops who will be on the beach, which could be a problem and tasks marked with a letter or number in a coordinate with which they are on the ship.

### Every Man Knows His Job

To keep in form, Marines practice at ports in the loading and unloading of ships. Even at boot camp school, in San Diego, they have a transparent plastic model of a Navy transport. Hence the greenest recruit learns what his ship in action has to help him to get out with its decks, hold, engine room, cold-storage plant, antiaircraft gun, etc.

At this time, before getting in sea, every man in the outfit knows just what his job is and how to do it. The plan for quick disembarkation on the Marine Corps is quite simple. The ship is to be used as a platform for the landing of the troops. If the Navy makes any change in the plan, the Marines must know, no matter how soon. Marines are kept informed.

This all means that orders for embarkation can be issued, and the force started on its way to the docks, even though the ships themselves may still be en route to that port or getting fueled and provisioned.

That's what the Marine Commandant, Gen. Clifton B. Cates, means when he says the Corps is "ready to go."

Gen. Cates says that the Corps is "ready to go" because it is "ready to go."

He is not with most of his men, but his men are very close to him. Every one of them is a "beach" and knows what his job is. Cates understands his problems and backs him to the hilt.

For this Commandant from Tennessee has a record of command that is impressive. He has led troops under fire at every echelon from platoon to division. His commands include a platoon of Marines, in one of World War I battles, a battalion in the Battle of the Somme, and a regiment in the Battle of the Marne. He has also commanded the Fourth Marine Division at Guadalcanal and the Fourth Marine Division at Tinian and Iwo Jima.

Under such leaders the men of the Marine Corps go forth again, ready to face their country's battles.

# We Took the Highroad in Afghanistan

By JEAN AND FRANK SHOR

*With Illustrations from Photographs by the Authors*

**R**EMOTE Wakhan! Some 700 years ago Marco Polo's caravan crossed the border-lined Orient and Occident. Great caravans of Marco Polo's type lashed their way across its craggy peaks and crevasses. Today, bypassed by modern transport, it stands virtually "out of this world."

But should the Communist drive for world power push south, Wakhan, a thin strip of no man's land separating Russia from Pakistan, lies like a gigantic tank trap across the most direct route to the riches of the Indian subcontinent (map, page 676).

A year ago the idea struck us: why not explore the ancient highroad on the rooftop of the world? We set our plans in motion, but met discouragement from all sides. It was barely possible that our proposed journey across prohibited military zones of Turkey and Iran might be arranged, we were told, but Wakhan was strictly taboo.

A number of scientists and explorers in recent years had requested permission to traverse the Wakhan corridor, but the Afghanistan Government had refused everyone. Even if permission were granted, the trip would be too dangerous, we were told. The tribesmen of the Pamirs were fierce and inhospitable.

We decided to go ahead with our plans anyway. We were well received in Ankara and Tehran and crossed Turkey and Iran without difficulty.

Then we went on to the capital of Afghanistan, Kabul, an up-to-date, progressive city with a population of about 250,000 (page 675).<sup>\*</sup> Here we expected our romantic journey to come to an abrupt end. We were advised to present our request to the director of the press. His Excellency Syed Kasim Khan Rishitya (page 701).

"What magazines do you write for?" Rishitya asked. When I mentioned that Jean and I had recently done an article for the NATIONAL GEOGRAPHIC MAGAZINE, Rishitya smiled broadly.

"I am a reader of THE GEOGRAPHIC," he said, "and so is His Majesty the King. You couldn't have a better recommendation."

Indeed, we couldn't. Two days later Rishitya summoned us.

"His Majesty," he said, "has ordered an exception in your case. You will be the first foreigners in more than 100 years to make the full journey. The Minister of War will

furnish a military escort, and I will send a journalist from my office as an interpreter."

We later discovered that one man had preceded us in the Wakhan traverse. H. W. Tilman, English mountain climber, in 1947 tried to cross the northeast tip, but the Kirghiz arrested him and took him down the corridor to Falezabad. Being under arrest, he had little freedom of observation. We were the first Westerners since the time of Marco Polo to explore fully the entire length of the corridor.

## A Visit with the King

We tried to express our gratitude, but Rishitya waved our thanks aside. "His Majesty will also receive you for an interview at his palace at Paghman. There you may photograph him and his son, Prince Nadir Shah."

Mr. Rishitya drove us to the palace, where we had a friendly chat with His Majesty Mohammed Zahir Shah. The King is well above medium height, slender and handsome, with a lean face and piercing eyes (pages 674, 682). He pointed to the current copy of the NATIONAL GEOGRAPHIC MAGAZINE on his desk and said, in perfect French, "I look forward to its arrival every month. I know of no better way to learn about the other peoples of the world."

The next two days were a whirl of last-minute preparations. Finally we struck out in a rented station wagon for Falezabad, capital of Badkhashan, with Ghulam Nazrat Khashan, the young journalist from Rishitya's office (page 685).

After a two-day trip over poor roads, we reached Falezabad, where we met the governor of Badkhashan, Mohammed Sawar Khan. He explained we should have no difficulty traversing the Wakhan because the snows would not come for another month. He said he would provide us with riding horses and pack animals, as well as military escort.

It all seemed too good to be true—and, as it turned out, it wasn't true. But that night we went to bed in high spirits, believing for the first time that we were going to succeed where so many had failed.

We spent the following two days preparing

<sup>\*</sup> See in the NATIONAL GEOGRAPHIC MAGAZINE "Back to Afghanistan" (October, 1946), and "Afghanistan Makes Haste Slowly," December, 1947, both by Maynard Owen Williams.

### Afghanistan's King Authorizes the Americans' Trip Through Forbidden Wakhan Corridor

The American Mission to Afghanistan, headed by Ambassador William H. Overton, has been authorized to travel through the Wakhan Corridor, a narrow strip of land in the north-east of the country, which has been forbidden to foreigners since the Russian Revolution.

For the past few years, the government has not allowed foreigners to travel through the Wakhan Corridor, a narrow strip of land in the north-east of the country, which has been forbidden to foreigners since the Russian Revolution. The government has not allowed foreigners to travel through the Wakhan Corridor, a narrow strip of land in the north-east of the country, which has been forbidden to foreigners since the Russian Revolution.

[illegible]

AN hour later still, we awakened a good night's rest and had an excellent breakfast on hot and cold water, and for lunch, and dinner, our hosts had arranged for us. But in the afternoon, the Vietnams began pouring up the water, and the night was very hot, and the rain was falling in a very heavy shower. We had our own quarters.

### Afghanistan's Wakhan Corridor Touching China, Insulates Pakistan from Russia

Across the border of the Wakhan Corridor, where Afghanistan touches China, lies the narrow strip of land known as the Wakhan Corridor. It is a narrow strip of land, about 20 miles long, which connects Afghanistan to China. It is a narrow strip of land, about 20 miles long, which connects Afghanistan to China. It is a narrow strip of land, about 20 miles long, which connects Afghanistan to China.

our nothing more than a small, isolated village. Two hours after dark we reached Zaskhan and hungry, tired and cold we went to bed. We found a small, simple, but comfortable mosque.

The next morning Koshan informed that the rental of the horses which had been arranged the previous day was 150 afghanis a day, or \$11. I told him of Wajid's insistence that the Government would provide for our transportation. Koshan knew that was not true. I was most embarrassed, for I was bound by Wajid's advice. I now had less than 1,000 afghanis. Obviously we would run short on a 12- to 15-day journey at 150 afghanis a day.

As we waited for fresh horses, we occupied ourselves with a little mendicancy. I tried to multiply 150 by 15 and get an answer less than 1,000. We were interrupted by the arrival of three ragged teen-age girls with matted hair who asked for food. We gave them some to their home for tea.

We found two families of about 15 people

living in a tiny smoke-filled hut, with no furniture. An ancient iron kettle steamed over a small fire in the center of the floor. We brought the elders with some food and gave the children fruit and sweets. They popped them into their mouths greedily and, before Koshan could remark on warning that the sweets would be removed, most of the children had swallowed them.

### Place Where the Salt Ends

Ultimately fresh horses were procured, and we started out for Ishkashan. The trail winds along a pleasant valley at an altitude of about 5,000 feet, with barren mountains rising to 10,000 feet on either side. Numerous small oases provide ample irrigation and the thin soil produces wheat, barley and a few vegetables.

Zaskhan, where we stopped for lunch, is a small village. No salt is found in the area, and inaccessibility and poverty have discouraged imports; so

for centuries to the people of the Wakhan have lived without salt. Their diet consists of rice, apricots, melons and pomegranates and a flat, salty landlocked sea pounded with wheat.

Few villages in the world are more beautifully situated than Ishkashim. It sits atop a hill overlooking the silver ribbon of the Oxus, surrounded by green fields and by the small stone-walled parks of the city. To the north, the Pamirs are a few miles away.

The telephone line from Kabul ends at Ishkashim and I asked Koshani to have the governor approve a \$100 check by telephone. The governor actually authorized the village treasurer to give me the legal rate of exchange, and we were both convinced the problem was solved.

The next morning, however, the village treasurer refused to give me the check, even after we appealed to the governor. Koshani had a brilliant idea.

"Let me give you a check," he said, "and the village treasurer will give you the money."

At Ishkashim he had photographed me standing with Mohammed Reza Shah Pahlavi. We hurried over the photograph, and in five minutes had the money.

Said Koshani: "The treasurer rules that if you are a friend of the Shah of Persia you must be good for \$100."

#### U. S. S. R., 200 Yards Away

From Ishkashim our path led down a long hill to the Russian border, so we had to cross the Afghan frontier. The valley of the Oxus is less than a mile wide. The river narrows to a mere 50 yards and the mountains of the Pamirs look like a wall of fire.

An Elderly Musician Plays a Solo on His Baby Cradle

Koshani, who is a friend of the Shah of Persia, had a brilliant idea. He gave me a check for \$100, and the village treasurer gave me the money. The village treasurer rules that if you are a friend of the Shah of Persia you must be good for \$100.

are plainly visible on the river bank. An old man sits on the Russian bank and frequently waves his hand in sight of the Afghan side, where no such movement exists.

Ordinary life in such a remote area must have little meaning, for here there is probably no intercourse between the two cities.

The streets were obviously deserted for our arrival. Our escort was there to meet us, and when we stopped at a small inn, a man was waiting for us. He walked a little bit, then he stopped and said, "I am sorry, but I am not a friend of the Shah of Persia."

He then turned and walked only a few

yards from here," he whispered. "We are afraid the Russians might cross the river at night and *catnap* you."

The Russians didn't "catnap" us, but the bedbugs did. They ignored our DDT powder and swarmed in by the thousand.

The next day we lunched at Urgand, a little village at about 9,600 feet altitude. Finding a heavy crop of wheat that high amazed us. This grain takes only 40 days from planting to harvest. It produces a heavy yield, and is apparently quite impervious to cold. We brought samples of the seed back to Washington where the Department of Agriculture is experimenting to determine whether it can be grown here (page 687).

### The Blessing of the Prophet

By noon the next day we reached Khandut, the administrative headquarters of the Wakhan district. There we met the judge of the Wakhan, a 70-year-old gentleman with a magnificent white beard.

He greeted us warmly. The Koran, he explained, urged all Muslims to travel widely, to know more of the other peoples of the earth, and ours was thus a mission which undoubtedly had the blessing of the Prophet.

We reached Qala Panja, the fort of the Oxus, at dusk (page 678). The garrison consisted of about 50 soldiers quartered nearby, captained by an officer who wore a United States Army blouse and Afghan trousers tucked in Russian boots.

The garrison commander had disturbing news of an incident at the Afghan-Chinese border. The Afghan Kirchiz, he reported, had been fighting with tribes on the Chinese Turkistan side of the border during the past few days, and the border might be closed. Koshan and Cadet Rashid made tentative suggestions about turning back, but we announced we would go as far as possible.

In four days of travel from Zenzak to Qala Panja we had climbed only about 500 feet, from 8,500 to 9,000, but after leaving the fort we turned sharply upward. For hours we scaled up a rocky cliff, our horses picking their way carefully along a narrow ledge.

We rode hard all afternoon, crossing one ridge of mountains and dropping down once more to the rocky river valley. As dusk fell, Rashid began to look worried. There was no trail, only a broad valley full of giant boulders, crisscrossed by foaming mountain streams. We plodded on for two hours after dark, our horses stumbling and slipping on the stones. Rashid would not admit he was lost. But he was, so we called a halt for the night.

Our bedrolls were with our baggage animals

and the soldiers, who had gone on ahead of us, so we prepared to sleep in our chagons. Rashid informed us that the country was full of wolves, so we took turns standing guard.

At 3 I awoke, to find Rashid sound asleep and the horses stirring restlessly. Jean awoke and insisted on guarding for a couple of hours too, so I dozed off.

Half an hour later I was awakened by a blinding flash and the howling of an animal obviously scared to death. I ran to Jean's side and found her holding our flash gun. A wolf had attempted to attack our horses, and Jean, having no more lethal weapon, had fired a flash in his direction. It did the trick.

One of our soldiers found us shortly afterward. The whole group of us spent the night searching for us. They had been worried because of the wolves. I smiled at Jean and explained that American girls were trained to take care of themselves around wolves.

### Private Bath in Public

An hour's ride brought us to Kharat, where we slept for a few hours. When we awoke the villagers brought us tea and saltless bread and Jean went off with the women of the village for a bath in privacy.

"Privacy, indeed!" Jean said later. The women brought her a pot of warm water, but the room unfortunately had no door. So off they went, looking into every hut, until they found one that did have a door. The girl evicted a protesting gentleman, brought in the water, and departed. Jean undressed and started to bathe. A moment later, one of the older women returned, squatted on the floor, and stared at Jean. Before long, half the female population of the village was watching.

They insisted on helping Jean dress. They had never seen laced boots before and kept wrapping the laces around Jean's legs, Afghan fashion. The zipper on her jacket fascinated them, and they took turns zipping it.

"My soap delighted them. One asked for a piece of it, and I smiled a 'Yes.' She cut off a chunk, and so did all the others. I ended up soapless, even had to borrow a piece back to wash my dirty clothes. I hardly finished dressing and returned to find Frank writing in my log that I'd gone off to 'bathe in privacy.' Men!"

I asked Koshan to find out if we were the first Americans these people had seen.

"They have never even heard of America," he said. "They never see foreigners."

We left the friendly village at noon and worked our way over rugged trails until dusk. Jagged mountains shaded the trail, those in Pakistan towering over 20,000 feet. Here we

# Aerial View of the New York City Police Department's 911 Dispatch Center

The New York City Police Department's 911 Dispatch Center is a large, modern building located in the heart of the city. It is a central hub for all emergency calls and dispatches, serving the entire five boroughs. The building is a prime example of modern architecture, with its glass and steel facade reflecting the surrounding cityscape. The interior is a vast, open space with a high ceiling and large windows, providing a bright and airy atmosphere. The center is staffed by a large number of trained dispatchers who work around the clock to respond to emergency calls. The building is a testament to the city's commitment to public safety and efficient emergency services.

met our best yaks, great ponderous animals with shaggy coats, sure-footed as goats on narrow mountain paths. We spent the night at Nurra, a tiny village at 10,500 feet, sleeping near a hot bubbling mineral spring (p. 686).

Pack yaks replaced our baggage horses the next morning. For four hours we forded the Oxus, crossing eight separate streams in the mile-wide river bed. The water was swift and ice-cold, and the animals staggered and struggled to keep their feet in the raging current. The water frequently came far above our stirrups, and we balanced our feet on our horses' necks.

An hour beyond the ford we came to Sarhad, the last military post in the Wakhan. The commissar greeted us warmly and led us to a pleasant grove on a mountainside.

#### Eating Fresh Peas Shocked Natives

While Jean napped, I took a stroll through the village. To my amazement, I found a garden full of green peas. It had been days since we had seen green vegetables. I bought peas, yak butter, milk, and a chicken, borrowed a pan, and returned to our grove. I built a fire and went to work.

When Jean awoke an hour later, our lunch was ready—fried chicken, fresh peas, toasted Afghan bread and butter, and a cup of cold milk. The children were horrified to see us eating green peas, and warned us, in sign language, that they would make us ill. Koshan later revealed that these people never eat fresh peas. They dry them, pound them to flour, and mix them with wheat for bread.

The commissar and Mr. Koshan returned with bad news. The earlier reports of border warfare were true. From Sarhad to Minkata, the Chinese border post, the trail leads across the Pamir Plateau, at an average elevation of more than 15,000 feet. There are no villages on the way, only a few settlements of wild Kirghiz tribesmen, contemptuous of any authority. Even the commissar, in two years at Sarhad, had never ventured onto the great plateau. He warned us the journey would be difficult and dangerous.

If we wished to risk the trip, he would help us. But he stressed the danger and suggested that we cross Baroghil Pass southward into Pakistan. I left the decision to Jean. She knew the dangers and knew her own strength. Did she want to try the journey over the Pamir (Dulix) Pass?

"With that fried chicken under my belt I can go anywhere," she laughed. "Why are all you men sitting around talking when we should be packing?"

The commissar smiled and shook her hand.

"The commissar says he is proud to know you," Koshan translated. "He will come with us tomorrow."

We started out at dawn the next day. The trail from Sarhad rises straight up, over paths of shifting shale and around rock chimneys. In some places the path is literally stuck against the cliff—rocks wedged into cracks in the stony wall, more rocks piled on top of them, and a thin covering of brush. Few sights are more disconcerting than to see daylight *through* the trail you are traveling.

The Fannir Pass is a series of 14,000-foot crests, interspersed with 10,000-foot valleys. Up and down we labored, leading our horses and prodding our gasping yaks. The commissar kept pushing us forward. We had a precarious bridge to cross, he remarked, and must make it before dark (page 692).

We reached the bridge at 5 o'clock. It was about 60 feet long, with a drop of 50 feet to the raging river. We crossed one at a time, leading our animals, while the structure swayed and creaked. One yak lost his footing, and the bridge lurched frighteningly. But we made it (page 688).

#### Fairytale by Moonlight

We were soon on our way down the trail. The mountainsides were masses of wild flowers: pink wild roses, showy daisies, candelions, buttercups, blooming thistles, and great patches of edelweiss. The sun went down and a full moon rose, bathing the whole scene in an unreal, golden light. It was fairytale.

As we plodded on, hour after hour, men and animals reached the point of exhaustion. By 9 o'clock we were ready to sleep on the rocks. Mr. Koshan asked the commissar when we would stop.

"He says there is a Kirghiz camp a few miles ahead," he translated. "We may reach it by midnight."

I looked at Jean. She hit her lip.

"Jeepers!" she breathed. "Why did I make that foolish switch back at Sarhad? Now I've got to keep up."

We reached the camp an hour later. As we halted in front of the two yurts (circular tents) which appear on the map as Langar, the commissar's horse dropped dead.

We slept that night in a felt-walled Kirghiz yurt, with a dozen-old members of two Kirghiz families. A fire of yak dung burned on the dirt floor. Despite the 12,000-foot altitude, we were warm and comfortable. In the morning we checked our pulses to see how we were reacting to the extreme height, and found both our hearts beating at 110 a minute: otherwise, we noticed no ill effects.

**Cross-legged in a Kirghiz Tent, Franc Sarr Pays His Life in Rahman Qul's Care**

When tenting tribe blocked the American way, the Kirghiz leader exacted ransom. The American paid it, and the tribe moved on. "I will be responsible for your safety," Rahman Qul promised. But when the Sarrs were in Moscow they learned that Rahman Qul had a reputation as a highwayman. (Below, p. 701.)

But we asked Koshan what was being demanded, but he insisted it was only a ransom.

Afterward the two messengers returned bringing some fierce Kirghiz men in huge robes and hats. They joined the whispering parley. I fell and I dozed off, full of worry.

We awoke to find our worst fears realized. After talking for Koshan dropped the matter. The Kirghiz were angry. They had been waiting for two weeks with tribes on the Chinese side of the border. The area beyond our campment was a no man's land, and several men had been killed there in the past weeks. The Kirghiz would not guarantee our safety beyond Bozai Gumbaz. He ordered we turn back.

But I and I held a conference of our own. We had set out determined to reach the Sui-Liang border. We were only two days from our goal. It was obviously dangerous to go on, but we had known we might face danger. We would go on.

I told Koshan of our decision. He was miserable.

"There is great danger," he said. "These tribesmen have no respect for life, not even

that of soldiers or government officials. Even if you and Mrs. Sarr are willing to take the chance, you must think of others. Remember, we have an escort of Afghan soldiers. They are not used to such a long journey. Afghan soldiers in such areas where there might be shooting. It is not a place of safety."

#### **Rahman Qul Accepts a Trust**

I had not, I said, considered it in that way. A trustworthy person on the spot to interpret for me while I talked to Rahman Qul, the Kirghiz leader.

Rahman Qul speaks Persian, Russian, English, Urdu, and Turki in addition to the Kirghiz language, and he can read and write in Persian and Russian. He can even spell out a few words of English. He has a frank, straightforward manner that made him easy to be trusted.

"We have traveled more than 11,000 miles to reach you at this point," he said, "and here, only two days from our goal, we face disaster. Our escort will go on either. We will leave the escort behind. We put our lives in your hands. If you will have us

A Pioneer on the Globe Traverser Agood Trail Through Wakhan Corridor. Mr. Shon, in Kabul, confers with Sayed Khatir Khan Khotak, Afghanistan's press director (page 673).

with the Chinese border, we will pay whatever you ask."

The tall Kirghiz smiled and put both his hands on mine.

"I accept your trust," he declared. "I will be responsible for your lives. I can accept no pay. You are our guests."

#### Receipt for Two Shors

Koshan was not happy about the arrangement, since he felt personally responsible for our safety. We agreed to give him a letter absolving him of all responsibility. But first he wrote a half page of Persian script and presented it to Rahman Qul, the Kirghiz chieftain read it carefully, then signed it. Koshan tacked it into his wallet.

"What was that?" I asked.

"A receipt for the two of you," Koshan said. "You are now out of our hands."

We asked Rahman Qul again to let us pay him. He refused. Then Jean had an idea. From her baggage she took a Lapel watch and pressed it into the Kirghiz's big hand.

"Tell him," she said to Koshan, "it is for his wife."

With a smile and a bow of thanks the chief accepted the gift.

We had a pleasant farewell dinner with Koshan, Rashid, and the courtier. We had

covered some rough ground together, and the next morning, when we said good-bye at dawn, it was with genuine regret.

Our new guide, Tiluh Waldah, looked like a real desperado—tall and slender, with drooping handlebar mustache and brilliant black eyes. With him came two yak pullers.

Rahman Qul came to see us off, and he and Tiluh Waldah huddled for a brief whispered conference. Then we were off across the grassy plain. The yak pullers prodded their lumbering animals into a rapid gait, and we were soon out of sight of the Kirghiz camp.

An hour from the camp Tiluh Waldah pointed out our path in sign language, and indicated he would ride the flank to watch for danger. He hopped off across the plain, climbed a low ridge, and disappeared.

#### Speaks in Infinity

We had an uncanny feeling of being remarkably little and alone. The great emptiness of the Pamirs spread around us, punctuated by jutting peaks. There was no sound except for the steady pace of our horses and the measured breathing of the yaks. Jean and I drew closer together riding hoot to hoot. The miles fed away as we rode on into that incredible silence (page 679).

Carefully we scanned the crest of the flank-

One by one, the seven Chinlese Cross a Tactery Bridge Spanning the River Kolya. The bridge is a simple stone arch, and the people are dressed in traditional Chinese clothing. The background shows a steep, rocky hillside.

Paved with Loose Stones, the Narrow Trail Threatened to Slip into the Chaos

Journalist Koshan, who follows, can slip a handle like with him described against the sun. "We should have seen a man in a white shirt and a white shirt," he said. "I saw a man in a white shirt and a white shirt." Koshan said about the river. At this is the company's role in the river.

ing hills but not once did our artiler appear. The yak pullers plodded silently behind us; the empty distance stretched ahead. Somehow the feeling grew on me that we were the only people left in the world, that the civilization of skyscrapers and automobiles was all a dream. There was not only else nothing else in the world, just the two of us.

As if in answer to my thoughts, Jean reached over and took my hand. Until dusk we rode foot to foot and hand in hand, two tiny specks in an infinite space.

Tiluh Waluh rejoined us at dusk. We camped near a little stream, brewed tea, and shared a flat wheel of Kirghiz bread. Our Kirghiz friends stood watch while we slept.

The next day passed in the same fashion. Hours of silent progress through a silent land. Then, a few hours before sundown, one of our yak pullers pointed to a notch in the mountain wall some two miles ahead of us. "Wakhjir," he said. We clapped each other on the back with joy. The Wakhjir Pass—end of the Wakhan. We had made it first foreigners in modern times to reach China by this ancient route. We kicked our tired horses into a trot.

Suddenly, less than a mile from the pass, a low, clear whistle swarmed through the evening air. We stopped, puzzled. Our yak pullers signaled us to dismount. Still mystified, we complied, and the Kirghiz dragged all the animals into a little gully and motioned to us to join them.

In a few minutes Tiluh Waluh joined us. At his signal we crept around a turn of the gully, and he pointed upward to the crest of the pass. Silhouetted against the darkening sky were three Chinese Turkistan soldiers. We looked questioningly at our guide. We tried to explain to Tiluh Waluh that the soldiers would be friendly. He shook his head. He pointed to them, then toward himself and us, and drew his forefinger across his throat. There was no mistaking his meaning.

We sat quietly beneath the lunk until dark. Then we mounted, and for 10 hours we rode across the Pamirs, halting only to let our dead-tired horses rest and graze. At dawn we stopped for a few hours' sleep.

When I awoke I tried to figure where we might be—possibly some 15 miles east and a little south of our starting point.

By now we were scared to death. I tried to tell Tiluh Waluh we wanted to return to Rahman Qul's camp. Whether he understood I shall never know. He simply shook his head, and pointed south to a wall of mountains.

Before noon we again reached the Oxus, here confined in a valley so narrow that we

had to ford the torrent half a dozen times (page 693). We ate the last of our Kirghiz bread and hiked endlessly up the mountain-side, leading our horses over shifting masses of shale which constantly gave way beneath their feet.

Toward evening we emerged in a lush, green mountain valley. A single yurt stood in the grassy vale. A fierce-looking Kirghiz, an ancient rifle cradled in his arms and a long knife hanging bare at his side, stood beside the low door. Tiluh Waluh spoke to him, and we heard the name "Rahman Qul" half a dozen times. Finally the Kirghiz signaled us to dismount and led the way inside.

### All the Which Wanted Was Everything

The interior was dirty and barren. A baby sat on the ground near the fire, and as we entered, a little girl came from behind the reed partition. Behind her came the most unpleasant-looking woman we have ever seen, a wrinkled hag with the face of a witch. She greeted our reluctant host with a blast of invective. Even the magic name "Rahman Qul" had no effect. There was no question about our being welcome—we weren't! But there was no place else to go, so we sat down with stiff smiles and warmed ourselves.

I offered everyone cigarettes, and the lady demanded the rest of the pack. I lit her cigarette, and she demanded the box of matches. We washed, and she scrubbed our soap. Jean put a soothing cream on her face cracked and swollen from exposure, and our hostess demanded the rest of the jar. We opened tins of meat and cheese from our vanishing emergency rations and shared them. Grandmother insisted on the balance of our stock. She didn't get it.

Avarice sometimes brings its own reward. I took a flash picture of the children and rejected the still-hot bulb on the floor. Our scrupulous friend ignored my warning and snatched up the red-hot bulb, acquiring a slight burn. When I treated her hand, she demanded the rest of our cream.

After our meager supper, Jean and I crawled into our sleeping bags and lay talking softly. Things looked bad. We didn't know where we were, or where we were going. Our present hosts were obviously unfriendly, and the next ones might be worse. Our experience at the Sinkiang border had shaken us badly. Since we were traveling with the Kirghiz, anything that happened to them would undoubtedly happen also to us.

That night, sleeping at 17,000 feet, Jean was bothered by the altitude. Her heart pounded so that she could not sleep lying

**Jean Seaw** Learns About Mort Life from a Knight Family in *Linger*

[illegible]

and pressed against the wall.

At dawn we broke an inch of ice from a little spring, washed, and made tea. Then came the hard blow: Tish Waldah took both our food and our sleds. "Sleds and food," he said, "I will take to the dogs. For our food for the night would take us on across the tower-ice mountain. Then we can get on well our way to the north, and we know about

As we walked over the snow-covered mountain side, I saw a small stream flowing down the slope. The water was clear and cold. It was a beautiful sight. We continued our journey up the mountain shoulder, still climbing, but now over walls of shale, slippery and dangerous. After an hour or so of climbing we looked for a rest on a tiny grass-covered plateau.

Above us stretched a mile-long snow field, ending its steep ascent in a wall of white nearly 200 yards high. It looked almost impossible to scale, but our guide informed us, with gestures, that it could be done later in

In afternoon, Wednesday, he returned, the melting snow and he made it dangerous. So we rested, sharing another tin of cheese and our last bar of chocolate.

For four hours we fought our way across that slippery floor and all Benjamin's work was lost. In the last 15 minutes air leaks came the gurgles of running water.

[illegible]

## Standing on Top of the World

The last few hundred yards were torture. We crawled on hands and knees, dazed by exhaustion driven only by the knowledge that we must cross the ridge and reach a lower altitude before dark. A night on that snow ridge could end only in death.

Somewhere we found strength, not only to move our own tired limbs but to drag the stumbling animals behind us. Even the kirghiz, born and bred on their high plateau, were gasping for breath. On we went, five yards at a time, lying in the snow and gasping between those brief advances. A few final steps, and we stood on top of the world!

We were on the crest of a great mountain range. All around us, as far as the eye could see, lay other mountain chains, their magnificent peaks punctuating the endless distance. Exhausted and gasping, we still could not take our eyes from the panorama of beauty.

For half an hour we rested and stared in awe. We were too tired to go on, but we had to go on. There was no trail ahead of us, only snow. Holding our horses by the bridle, we slid across the edge, bounding and slipping downward through the snow.

Two thousand feet below we reached an incline of shale, and worked our way crabwise down and across it. Long after dark we gouged a trail out of the shale and slept through a fast blizzard.

#### Pakistan at Last!

Another day of sliding down shifting shale, still not knowing where we were bound. On we went, always down. Suddenly we reached a narrow wall of rock and saw in a narrow valley far below us a square stone fortress, with the flag of Pakistan flying in the breeze.

Our guide pointed to the fort. "Kalam Datchi," he said. I checked our maps and finally found it, formerly a tiny British outpost in the princely State of Hunza.

The tall Pakistani soldiers of the post spoke a little English and told us that the village of Muzat, five miles down the valley, had a guest bungalow. We hurried onward, and two hours later were warmly greeted by an English-speaking telegraph operator and the mayor. They were not pleased, however, to see our Kirghiz guides. We paid them generously, bade them a grateful farewell, and they started back for their Pamir homeland.

After a warm meal and a long night's sleep we got out our maps, plotted the course we had come, and assayed the results of our journey. We were still only a day's ride from the Chinese Turkistan frontier. It would not be difficult to organize a new caravan in Hunza and continue our journey. We had succeeded in our prime goal of traveling the Wakhan corridor from end to end—the first foreigners in modern times to make the journey from west to east.

Two discoveries were left for us. The first came when, plotting our route on our maps,

we discovered that the final pass we had crossed was the towering Dohli Sang, more than 20,000 feet high! We had reached that great height without knowing where we were and without oxygen equipment of any kind (pages 681, 696).

#### The Legend of Rahman Qul

The second discovery left us a little surprised. It came the day after our arrival in Muzat. The mayor called on us.

"These Kirghiz men you come with," he said, "belong to the of Rahman Qul?"

"Yes," we nodded. "Rahman Qul is a very good friend of ours, a wonderful man."

The mayor shook his head. "Rahman Qul very bad man," he said firmly. "He rob caravans, kill many people. Very bad!"

We stared in disbelief. And then he told us a few tales about our benefactor. Two years before, the mayor began, Rahman Qul and his tribe had crossed the Russian Fannus. There they had robbed a caravan and murdered every man in it. Pursued by the Russians, they had fled into Chinese Turkistan and taken up residence near the border post of Muzat.

Rahman Qul had become a close friend of the commander of the little Chinese border garrison. Less than a month before we met him he had invited the commander and his garrison of eight men to a lunch on a Mohammedan festival day. While the Chinese were eating, Qul's tribesmen had stolen into the tent behind them and murdered every man in cold blood, the mayor reported. They had looted the garrison of guns, ammunition, horses, and supplies, and fled across the Afghan border to resume residence on the Pamir Plateau.

"For many years this Rahman Qul murder and rob people," the mayor insisted. "Very bad man. Why he no murder you?"

I remembered the night we talked with Rahman Qul in his smoky yurt, high up on the great Pamirs.

"We put our lives entirely in your hands," I had said. And his answer: "I accept your trust."

"Why he no murder you?"

I looked at the mayor and shook my head. "I don't know." I looked at Jean. I could see she agreed with me. We didn't know. Probably we never would know. But to us, Rahman Qul would always be the man who saved our lives.\*

## RDC—All-purpose Railway Passenger Coach

RDC, introduced a year ago, is the new all-stainless-steel, self-propelled Budd *rail diesel car*. It is good looking, quiet, smooth riding. It is comfortable, clean and air-conditioned.

The New York Central now has two Budd RDC's operating in express service between Springfield and Boston, and a third providing local service between western Massachusetts and Albany.

Western Pacific has two RDC's covering the 924 miles which separate Oklahoma and Salt Lake City.

Pennsylvania Reading Seashore Lines have just placed six RDC's in operation between Camden, Ocean City, Wildwood and Cape May. They leave Camden as a six-car train and end up as two-car trains at each of the three Jersey seashore cities.

Chicago & North Western has three RDC's in commuter service; the Baltimore & Ohio will soon have two and New York, Susquehanna & Western, four.

These varied uses to which RDC is being put cover almost every kind of service a railway passenger coach can render.

The general acceptance of the Budd all-stainless-steel RDC suggests that the development of railway passenger coach equipment may be headed in a new direction.

**Saves you over 200 hours of work a year!**

**Frees your hands from dishpan soaking!**

# NO OTHER AUTOMATIC DISHWASHER CAN MATCH THIS GREAT NEW G-E!

**U**NTIL you've tried it, it's hard to believe what a convenience this great new General Electric Automatic Dishwasher is!

With many superb new features, it has an amazing capacity and does more than any other dishwasher — it helps you over 200 hours of hard dishpan-soaking work every year — over 200 long hours of extra leisure time!

It saves you from all the tedious work of hand-dishwashing — it'll save your soup, and dish towels — leaves nothing of your responsibility!

It is — a kitchen appliance way ahead — coming to the American home — and to kitchens which are busy with the hostess, the busy mother! Automatic Dishwasher!

## COMBINATION MODEL \*

Automatic Dishwasher built into built-in sink. Dishwasher built into built-in cabinet with ample storage space. The top of built-in model can be raised for easy access!

## FREESTANDING MODEL

The new freestanding G-E Automatic Dishwasher has that modern built-in appearance — no cabinet needed!

**The new G-E dishwasher has all these features:**

- **Completely Automatic** — Just push one simple control!
- **New Power Pre-rinse** — Flushes food particles off dishes every before washing begins!
- **"Spray-Rub" Washing Action** — Hot water spray cleans, polishes and spot-removes dirt from!
- **Higher Water Temperatures** — New Calrod heating unit begins to increase temperature from the instant machine starts!
- **Drying by Heated Air** — Calrod heating unit provides electrically heated air for quicker drying!
- **Top Opening** — No stooping!
- **Great Capacity** — Washes complete family service for entire week — a day's low — for an average family of four!
- **Saves You More Than 200 Hours of work every year** — Saves your hands from dishwater!
- **Long-lasting Dependability** — Famous G-E name assures you long years of trouble-free days!

WILL NEVER, NEVER BREAK

## How to behave while *being* robbed

**BURGLAR IN THE BEDROOM** Don't resist! The burglar is a professional thief. He knows how to handle you. He will shoot you if you resist. He will take your money and jewelry. He will leave you with nothing but a few dollars and a few minutes of your life.

**HOLDUP ON THE STREET** Don't resist! The one thing you can't afford to lose is your life. If you ever come to him for an order, that's why the holdup man. What is he wearing? Any unusual features? You may have a chance to identify him later.

**PICKPOCKET IN A CROWD** Don't resist! The person who is picking your pocket is a professional. Pickpockets usually work in pairs. One man will keep you peeled for an opportunity. During the confusion, he probably will be able to get away.

## What to do before being robbed

See an Agent of one of the North America Companies. If you do not know who he is in your community, write us, and we will see that he gets in touch with you. The few minutes you spend with him may save you hundreds of dollars. He'll show you how little it costs to have the broadest protection against theft, including Burglary and Holdup. Also, he'll give you friendly, competent advice regarding your Fire, Automobile, Accident or Liability insurance. And you'll feel safer knowing that your insurance will be placed in one of America's oldest, strongest and most progressive organizations.

Your North America Agent wants to save you money and protect your investment. See him now, won't you?

Insurance Companies of North America, founded in 1783, are the oldest and most established of any insurance company in the United States. They have a long record of successful service to the public. They are the only insurance companies in the United States that have been in business for over 100 years. They are the only insurance companies in the United States that have been in business for over 100 years.

# YOU CAN BE SURE...IF IT'S Westinghouse

## ALL ABOARD... FOR THE BIGGEST BARGAIN IN AMERICA

These 40 models are all going downtown for a total fare of \$100.

It would cost them eight times that much to go in their own automobiles.

Match that for value received... anywhere, any time.

That's management with a capital M. Be proud of it. And remember that if in your city the actual fares are a bit higher, your transit management has particularly tough problems to meet.

We know something about these problems

because we've been serving these fine transit organizations for many, many years.

They know they can be sure of Westinghouse electrical equipment on street cars and trolley coaches. We like to think the efficiency and dependability of our motors and other apparatus has helped considerably in giving you today's transportation bargain.

Making electrical equipment of all kinds is our business. Making it quantities only is the best... is our creed. We express the creed in these words: You can be sure... it's Westinghouse.

WESTINGHOUSE ELECTRIC CORPORATION • • • PITTSBURGH • PA.

MORE SUN in Tucson than in any other resort city!

For sun + fun this winter  
come to warm, dry Tucson

ENJOY TRUE WESTERN HOSPITALITY. Tucson offers plentiful accommodations at sensible rates — smart resort hotels, friendly guest ranches, ultra-modern motels, apartments and cottages. Youngsters grow strong and brown attending one of Tucson's accredited public or ranch schools; University of Arizona. Plan to swim in outdoor pools. Ride horseback. Golf at fine country clubs. Drive down the new paved highway to Guaymas in colorful old Mexico for marvelous fishing, hunting. Come early — spend the winter in Tucson's glorious sunshine. Save your shopping until you get here.

# in 15 minutes I was out of business ... even with Fire Insurance!

"It was a fireproof building...I was insured... then it happened! A match in a waste basket ...a careless cigarette...who knows."

"It was over in a matter of minutes. But when I opened the safe—there were my accounts receivable, inventory records, contracts, the life-blood of my business, *in ashes!* And without those vital records I could not collect fully on my insurance because I could not establish *proof* of my loss!"

Statistics prove that out of every 100 firms that lose their records by fire, 43 *never recover*.

If your present safe does not carry the label of the Underwriters' Laboratories, Inc., it cannot be trusted to give adequate protection. Many fireproof buildings have been completely gutted—*rather papers reduced to ashes in seconds!*

Why take chances? Give your business the protection it needs with a Mosler "A" Label Record Safe certified by the Underwriters' Laboratories, Inc., against the hazards of fire, impact and explosion.

Send the coupon today for complete details.

Want to know how wonderful Winter can be?

# Start Your Vacation in Switzerland

Such ski slopes—hundreds of them—  
with chalets and fun houses, are all  
in the Bernese Oberland area. And to  
complete the scene, lovely towns and vil-  
lages—such as Interlaken—restle in the  
valleys. It's as much fun to see as it is to  
ski under the warm Swiss sun in the  
Oberland, the Engadine and the Reg-  
ion des Grisons. But the most exciting  
is the snow.

Hop aboard a train for  
local traveling—a very  
easy snow- and sun-  
capped Alps. Everywhere  
you look you'll see a  
Chalet or a cabin. Every-  
where you go you'll want  
to linger. But don't. An-  
other train is waiting  
where the next train  
you can be almost any-  
where in Switzerland.  
And fares—some up to  
50% on special Swiss  
travel fares.

The man to know  
before you go  
is your  
**TRAVEL AGENT**

History goes back a long time  
in cities like Zurich, Switzerland's  
largest. You'll find castles, a great  
opera theatre, Switzerland's biggest  
cathedral and markets. And there are  
restaurants, hotels, camps, pleasantly  
for your comfort—and your dinner  
and the local wine for Switzerland  
is one of Europe's most famous  
wines in home areas.

There's an exciting reason every season  
to start your vacation in SWITZERLAND

## "Snug Harbor"

It is as well to remember that ships protection from stormy seas, there are protective coatings today that guard them against wet, snow, salt spray and other damaging forces.

To make a plastic covering for slaper hulls, the cover is made of a system of battens and rest battens, spaced at twice as long between every battens in downstroke for cleaming and painting, on inside and outside, there are 40 gages in each side of hull, and 2000 small strips shape.

Landing gear and tanks ashore - get double  
 protection, and sink from plane attacks.  
 Landing gear is on 1 pair, never leaving the  
 tank well. The tank used is safe from attack by  
 war planes, attack, or other things.

These seaport facilities are made of the same materials as the other three, except that the concrete is reinforced with steel in the beams.

and in our homes, is a triumph of synthetic chemistry: these essential life materials are produced for us from organic chemicals.

These plastics and chemicals are produced in large quantities and are part of the hundreds of major products supplied by the people of Union Carbide. They are multipurpose materials for many applications.

# Some simple facts about DIABETES

Diabetes is a condition in which the body is unable to utilize properly the sugar and starches in food. This condition is due to a deficiency in the body's supply of insulin. However, the use of insulin, made from the pancreas of animals, has made the treatment of diabetes increasingly

effective. As a result, diabetics usually live long and nearly normal lives. In fact, the average life for the average diabetic today is double what it was before insulin was discovered, and has increased even more for young diabetics.

1

## RESEARCH promises more effective treatments for diabetes

Medical science is constantly improving the treatment of diabetes. Different types of insulin, which vary in speed and duration of action, have been developed to meet the varying requirements of patients. New types of insulin are under development.

fast action with long lasting effects.

There is continuing research on other phases of the disease. Work with radioactive isotopes and other studies offer the hope for further progress in treatment, and perhaps for the prevention of some cases of the disease.

2

## DETECTION is important in controlling

Having periodic medical examinations that include a check for diabetes helps to insure early diagnosis. If treatment is started at once, serious complications can usually be avoided.

It is now possible for anyone who suspects diabetes to make a simple,

inexpensive test at home for sugar in the urine—most of the standard kits for this test may be obtained at most drug stores. If the results of the test are positive, a doctor should be consulted for a complete examination.

3

## TREATMENT is largely the patient's responsibility

Cooperation between patient and doctor is essential. Only the physician can determine whether or not insulin is required, and in what dosage. He will also prescribe proper diet and advise about necessary exercise.

Once the correct treatment is established, the patient should be careful

and faithful in following the prescribed treatment. The patient should be alert for possible complications. If the average diabetic observes these and other precautions, he can usually look forward to living a full and useful life.

**Figure 1.** The effect of the number of iterations on the accuracy of the proposed algorithm. The accuracy of the proposed algorithm increases with the number of iterations. The accuracy of the proposed algorithm is 0.9999 after 100 iterations.

As the 2000 election drew near, the Bush campaign began to make a play for the Latino vote. In the weeks before the election, Bush's campaign released a series of advertisements featuring the faces of Latino celebrities, including actors like Antonio Banderas and Salma Hayek. The ads were designed to appeal to the growing Latino population in the United States, which was projected to become the largest ethnic group in the country by the year 2010. Bush's campaign hoped to win the support of Latino voters, who were seen as a key demographic group in the swing states of Florida and New Mexico.

the authors have not been able to find any other studies that have examined the effects of the use of a single, non-validated, self-report measure of the construct of self-esteem. The authors have also not been able to find any other studies that have examined the effects of the use of a single, non-validated, self-report measure of the construct of self-esteem.

For the sake of the future, we must not only  
 be able to do things, but we must also be  
 able to do them well. And this is  
 the only way to ensure that the future  
 will be a better one than the past.

1.  $\mathcal{L}(\mathbf{y}|\mathbf{x}) = \prod_{i=1}^n p(y_i|\mathbf{x})$   
 2.  $\mathcal{L}(\mathbf{y}|\mathbf{x}) = \prod_{i=1}^n p(y_i|\mathbf{x}_i)$   
 3.  $\mathcal{L}(\mathbf{y}|\mathbf{x}) = \prod_{i=1}^n p(y_i|\mathbf{x}_{-i})$   
 4.  $\mathcal{L}(\mathbf{y}|\mathbf{x}) = \prod_{i=1}^n p(y_i|\mathbf{x}_{-i}, y_{-i})$

Figure 2. The effect of the concentration of the polymer on the  $\alpha$ -transition temperature.

Although the above information is not sufficient to fully understand the various parts of the system, it is hoped that the reader will be able to find the information needed to understand the system. The system is a complex one, and the reader is encouraged to read the entire document to gain a full understanding of the system.

Let  $\mathcal{A}$  be a  $\mathcal{C}^*$ -algebra and let  $\mathcal{B}$  be a  $\mathcal{C}^*$ -subalgebra of  $\mathcal{A}$ . Suppose that  $\mathcal{B}$  is a  $\mathcal{C}^*$ -ideal of  $\mathcal{A}$ . Then  $\mathcal{B}$  is a  $\mathcal{C}^*$ -ideal of  $\mathcal{A}$  if and only if  $\mathcal{B}$  is a  $\mathcal{C}^*$ -ideal of  $\mathcal{A}$ .

Now, General Electric brings you the first new kind of Automatic Blanket, one that feels as warm as it makes you feel. It has a new "G-E Blanket."

It's advanced far beyond the old blanket of yesteryear,

with a super-sensitive control that feels the word "warmth" and sends the heat against cold spots, or even warm spots. Gives you the most cozy comfort of any blanket! General Electric Company, Bridgeport, Connecticut.

**For your automatic sleeping comfort—**

## **GENERAL ELECTRIC'S NEW KIND OF AUTOMATIC BLANKET!**

Enjoy sleeping bliss at its newest and best! Summer-like warmth from corner to corner! That's the sleeping joy of the shiny new G-E Automatic Blanket.

No more "feels" — no more "makes you feel" — no more covers that simply "hold" comfort for the smothering warmth you want. It feels — automatically to all new and old types — just exactly the temperature. No matter what the weather does — you're cozy all night long!

Can't get the savings? The comfort of a new G-E Automatic Blanket costs only a few pennies a night. Takes the place of three ordinary blankets. Cuts

laundry bills . . . saves time . . . washes beautifully. Soap doesn't break new Rose color, green, blue. See your G-E dealer today.

**Over 1,000,000 G-E Automatic Blankets have been sold! Read what delighted owners say . . .**

"I've been able to keep colds away with only one blanket." Mrs. Alfred Buell, Waukegan, Ill.

"It's swell! Cozy, peaceful sleep all night!" Clifford Smith, Brooklyn, N.Y.

"It's wonderful to sleep cozy, guaranteed bed!" Mrs. Jack Titus, Los Angeles, Cal.

*You Get Automatic Blanket Comfort more than other makes — more comfort!*

**TO HELP YOU MAKE  
AN IMPORTANT DECISION**

### A Free Booklet!

Most of us have had very little experience in selecting a major for life — yet it is one of the most important decisions we can make!

It's a relief to know that decisions made by a local committee, a state historical commission, a block of firms and numerous individuals will be judged because a memorial that will endure through the years.

"Monument Ideas" is published in Barre, Vermont, "Granite Center of the World," by the Barre Guild — whose Seal identifies only the "best memorials."

Your free copy of "Management Ideas" will be mailed to you without charge when you just mail the attached coupon.

## Is "cutting down on coffee" a problem to your patients?

What if you have a patient affected by too much caffeine in coffee, you may suggest they limit their coffee-drinking to two, or maybe three cups a day.

While this is a less drastic step than to stop them from drinking coffee altogether, it still leaves the patient with the temptation to go over the limited amount.

Sanka Coffee, however, is the *perfect* answer for any patient affected by caffeine in any amount.

With Sanka there's no need to cut down on coffee at all. For Sanka is a real coffee that is 97% caffeine-free. Patients can drink all the Sanka they want to, and without the slightest question about caffeine effect.

We suggest that you try drinking Sanka your self. We know you will appreciate what a fine coffee it is.

And — if you are affected by caffeine — it may very well be the answer to your own problem, as well as that of your patients!

## Sanka Coffee

*Real coffee with the worry taken out.  
Drink it and sleep!*

## Good thing he's grown

He seemed like a big fellow in the rush days of 1941. But it's a good thing he's bigger today. For the telephone system of nine years ago couldn't possibly do today's job.

Since 1941, the Bell System has increased the number of telephones by more than 16,000,000. There are nearly

twice as many now as nine years ago.

Millions of miles of Long Distance circuits have been added. Billions of dollars have been spent for new equipment of all kinds. The number of Bell Telephone employees has increased to more than 600,000.

Times like these emphasize the benefits of such growth and the value of a strong, healthy telephone company to serve the Nation's needs.

For now, more than ever, the Nation depends on telephone service to get things done and speed the job of defense.

BELL TELEPHONE SYSTEM

You relax in the sun.

You dine superbly,  
graciously.

You live in new beauty  
and comfort.

You sleep in air-  
conditioned staterooms.

Then Hawaii—  
feasts, dances,  
sparkling surf and tropical  
gardens...a golden,  
happy vacationland where  
summer never ends!

*Fashions by J. Magnin & Co., California*

## *Have you ever known a South Seas night?*

It's like a night in another world...a warm, enchanted world filled with music and moonlight. And when you stroll the deck, watching tropical waves splash gently past the bow, you hear the trade winds whisper their promise of adventure...of shipboard fun, dancing, swimming, sunbathing, deck games—and a glorious time in the Islands. For unforgettable days and nights...
